The purpose of this meeting is to review and provide feedback on sea turtle trawl bycatch issues and the ongoing research on mitigation measures in the Greater Atlantic Region. Fisheries bycatch is a primary threat to endangered and threatened sea turtles and occurs at high levels in trawl fisheries such as croaker, longfin squid, and summer flounder. NMFS and other partners have been investigating mitigation measures such as gear modifications called Turtle Excluder Devices (TEDs) or limited tow durations to reduce mortality of incidentally bycaught sea turtles.
