SUPPLEMENTARY INFORMATION:

Title of Collection: 2003 Survey Of Doctorate Recipients.

OMB Approval Number: 3145-0020.

Expiration Date of Approval: April 30, 2003.

Type of Request: Intent to seek approval to extend an information collection for three years.

1. Abstract

The Survey of Doctorate Recipients (SDR) has been conducted biennially since 1973. The 2003 SDR will consist of a sample of individuals under the age 76 who have earned research doctoral degrees in science and engineering from U.S. institutions. The purpose of this longitudinal study is to provide national estimates on the doctoral science and engineering workforce and changes in employment, education and demographic characteristics. The study is one of three components of the Scientists and Engineers Statistical Data System (SESTAT), which produces national estimates of the size and characteristics of the nation's science and engineering population.

The National Science Foundation Act of 1950, as subsequently amended, includes a statutory charge to “* * * provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources, and to provide a source of information for policy formulation by other agencies of the Federal Government.” The SDR is designed to comply with these mandates by providing information on the supply and utilization of nation's doctorate level scientists and engineers. Collected data will be used to produce estimates of the characteristics of these individuals. They will also provide necessary input into the SESTAT labor force data system, which produces national estimates of the size and characteristics of the country's science and engineering population. The Foundation uses this information to prepare congressionally mandated reports such as Women, Minorities and Persons with Disability in Science and Engineering and Science and Engineering Indicators. The NSF publishes statistics from the survey in many reports, but primarily in the biennial series, Characteristics of Doctoral Scientists and Engineers in the United States. A public release file of collected data, designed to protect respondent confidentiality, also is expected to be made available to research on CD-ROM and on the World Wide Web.

The National Opinion Research Corporation at University of Chicago will conduct the study for NSF. Data are obtained by mail questionnaire, computer assisted telephone interviews and web survey beginning October 2003. The survey will be collected in conformance with the Privacy Act of 1974 and the individual's response to the survey is voluntary. NSF will insure that all information collected will be

kept strictly confidential and will be used only for research or statistical purposes, analyzing data, and preparing scientific reports and articles.

2. Expected Respondents

A statistical sample of approximately 40,000 U.S. doctorates will be contacted in 2003. A total response rate in 2001 was 83%.

3. Estimate of Burden

The amount of time to complete the questionnaire may vary depending on an individual's circumstance; however, on average it will take approximately 25 minutes to complete the survey. We estimate that the total annual burden will be 16,666 hours during the year.

Dated: December 18, 2002.

Reports Clearance Officer, National Science Foundation.
