

and operational data to assess if there are significant impacts or other issues related to the trial suspension that might inform future decisions.

The City of Chicago is continuing plans to improve the airport's throughput, efficiency, and terminal access. New construction of Runway 9C/27C is expected to continue through 2020. An extension of Runway 9R by about 3,000 feet and shortening of Runway 27L by about 300 feet and Terminal 5 expansion are in progress. Both projects are expected to continue into late 2021. Various taxiway construction projects are underway or planned for the next few years. Some of these projects, especially runway closures, impact capacity while others such as taxiway and terminal construction may limit surface movements and options for holding aircraft, or increase operational complexity in the short term. There is currently Level 2 schedule facilitation for Terminal 5 and the terminal is constrained at peak times.

Several airlines and the airport operator expressed support for continuation of Level 2 to address potential congestion issues over the next few years. Many of the statements made by airlines summarized in the LAX section of this Notice on submitting schedules for review, including a preference for early notice of adjustments, were also expressed with regard to ORD. No airlines expressed a preference for a change to Level 1 in the near term. Additionally, the FAA notes that ORD is uniquely situated as one of the few airports in the U.S. that is a major hub for two airlines, each of which has a substantial portion of the total operations at the airport. Currently, there is a degree of separation between the arrival and departure banks of the hub airlines that limits schedule peaking. There have been occasions when one or both airlines have changed schedule banks and overlapped schedules causing demand to exceed capacity. The resulting in delays and flight cancellations impacted ORD and other airports in the National Airspace System (NAS). The FAA worked with airlines to revise schedules. Until the changes were effective, there was significant impact to the operation and disruption to airline networks and passengers. The FAA finds that given ORD's demand and the importance of the airport to the NAS, the Level 2 process provides an opportunity to try to work with airlines to voluntarily adjust schedules before they take effect and reduce potential delays.

SFO

The FAA designated SFO as Level 2 effective in 2012 as a result of low on-time performance relative to other airports, expected growth in scheduled demand, and runway construction.⁸ Separately, the airport also had planned runway construction after the Level 2 designation was effective, which contributed to congestion. Today, the airport continues to have high demand in certain hours even with Level 2 and is limited in some cases by gate availability during peak hours. SFO continues to be one of the more delay-prone airports in the U.S. Since 2012, operations at SFO have increased about 10%, and the proportion of flights delayed has increased about one percentage point.⁹

Stakeholders generally expressed support for retaining the Level 2 designation to help facilitate the movement of scheduled flights into less congested periods. Operationally, surface constraints limit holding and staging areas for aircraft and demand for gates remains high. Terminal 1 construction is underway and expected to be completed in 2022. SFO facilitates international passenger flights under the Level 2 process, which is complementary to the FAA runway review. As with LAX and ORD, airlines generally favored retaining the FAA's Level 2 designation. Some opined that SFO's runway layout limits the airport capacity, especially in adverse weather conditions, and the delays and performance strongly support continuing efforts under Level 2 to manage schedules and reduce delays. The FAA finds that the Level 2 process should be retained at SFO in order to facilitate voluntary schedule adjustments in an effort to reduce potential delay associated with growing scheduled demand.
