Abstract: EPA's Office of Research and Development proposes to conduct a residential and personal exposure field monitoring study in the city of Detroit, MI over a three-year period from 2004 to 2006. The primary goal of the study is to evaluate and describe the relationship between air toxics and PM constituents measured at a central site monitor and measurements of residential and personal concentrations. An emphasis is placed on understanding the impact of local sources (point and mobile) on outdoor residential concentrations and the impact of housing type and house operation on indoor concentrations.
