SUPPLEMENTARY INFORMATION:

I. Background

30 CFR part 77, subpart C, sets forth standards for surface installations. More specifically, these sections address refuse piles (30 CFR 77.215), and impoundments (30 CFR 77.216). Impoundments are structures that can retain water, sediment, or slurry or any combination of materials; and refuse piles are deposits of coal mine waste (other than overburden or spoil) that are removed during mining operations or separated from mined coal and deposited on the surface. The failure of these structures can have a devastating affect on a community. To avoid or minimize such disasters, standards have been promulgated for the design, construction, and maintenance of these structures; for annual certifications; for certification for hazardous refuse piles; for the frequency of inspections; and the methods of abandonment for impoundments and impounding structures.

Section 103(e) of the Mine Act directs the Secretary of Labor not to impose an unreasonable burden on small businesses when obtaining any information under the Mine Act. This information collection does not have a significant impact on a substantial number of small entities.

II. Desired Focus of Comments

MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
 - Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
 - Enhance the quality, utility, and clarity of the information to be collected; and
 - Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.
- A copy of the information collection request can be obtained by contacting

SUPPLEMENTARY INFORMATION:

I. Background

Section 101(a) of the Federal Mine Safety and Health Act of 1977 (Mine Act) requires that the Secretary must develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines. Under section 103(a)(2), authorized representatives of the Secretary of Labor or Secretary of Health and Human

Services must make frequent inspections and investigations in coal or other mines each year for the purpose of gathering information with respect to mandatory health or safety standards.

Sections 75.159 and 77.106 require coal mine operators to maintain a list of persons who are certified and those who are qualified to perform duties under Parts 75 and 77, such as conduct examinations for hazardous conditions, conduct tests for methane and oxygen deficiency, conduct tests of air flow, perform electrical work, repair energized surface high-voltage lines, and perform duties of hoisting engineer. The recorded information is necessary to ensure that only persons who are properly trained and have the required number of years of experience are permitted to perform these duties. MSHA does not specify a format for the recordkeeping; however, it normally consists of the names of the certified and qualified persons listed in two columns on a sheet of paper. One column is for certified persons and the other is for qualified persons.

Sections 75.100 and 77.100 pertain to the certification of certain persons to perform specific examinations and tests. Sections 75.155 and 77.105 outline the requirements necessary to be qualified as a hoisting engineer or hoist man. Also, under §§ 75.160, 75.161, 77.107 and 77.107–1, the mine operator must have an approved training plan developed to train and retrain the qualified and certified people to effectively do their tasks.

These regulations recognize State certification and qualification programs. However, where State programs are not available, MSHA may certify and qualify persons.

The MSHA program will continue to qualify or certify individuals as long as these individuals meet the requirements for certification or qualification, fulfill any applicable retraining requirements, and remain employed at the same mine or by the same independent contractor.

Applications for Secretarial qualification or certification are submitted to the MSHA Qualification and Certification Unit in Denver, Colorado. MSHA Form 5000–41 provides the coal mining industry with a standardized reporting format that expedites the certification and qualification process while ensuring compliance with the regulations. MSHA uses the form's information to determine if applicants satisfy the requirements to obtain the certification or qualification sought. Persons must meet certain minimum experience requirements depending on the type of certification or qualification.

Section 103(e) of the Mine Act directs the Secretary of Labor not to impose an unreasonable burden on small businesses when obtaining any information under the Mine Act. This information collection does not have a significant impact on a substantial number of small entities.
