Abstract: We will investigate social vulnerability to coastal storm flooding in urban neighborhoods to assess inequities in the burden of flood risk. Recent flood disasters arising from severe coastal storms and hurricanes (*i.e.*, Hurricane Ida in 2021) have demonstrated the critical importance of incorporating rainfall into assessments of coastal flood risk. Climate change is leading to increased rainfall intensity and more frequent coastal flooding, which is increasing risk for residents of low-lying areas such as basement apartments, who are often low-income or from minority racial groups. We will collect data on vulnerability to flooding from rainfall and coastal storms through interviews, focus group discussions (FGD), and household/small business surveys. Participants will be drawn from residents and businesses in the Jamaica Bay watershed in and around Brooklyn, New York. Participants are being identified through snowball sampling and contact with community leaders. Participants will share their experiences, concerns, and responses to flooding events and risks, through individual interviews or focus groups. Interviews will be recorded, transcribed, and analyzed using qualitative data analysis software such as Atlas.ti.
