NATIONAL SCIENCE FOUNDATION

Notice of Permit Emergency Provision

Under the Antarctic Conservation Act of 1978 (Pub. L. 95-541)

AGENCY: National Science Foundation.

ACTION: Notice of permit emergency provision for hazardous waste stored in Antarctica at a location other than a permanent station for more than 12 months due to an emergency, as specified by § 671.17.

SUMMARY: The Program of Environment Safety and Health in the Division of Polar Programs in accordance with § 671.17, is giving notice that an emergency relating to considerations of human health and safety caused hazardous waste to be stored in a location other than a permanent station for more than 12 months.

Hazardous waste in the form of one 55 gallon drum of waste fuel was packaged for removal from the field camp at the end of the 2012-2013 season. This waste was to be removed during the 2013-2014 summer season.

Due to the October 2013 government shutdown, the National Science Foundation began an orderly shutdown to "caretaker status" (i.e. the protection of life and property only) of the United States Antarctic Program (USAP). Once the government was reopened, it was impossible to support a normal summer

field season. The lack of infrastructure available included the means to support a safe operation to recover this waste fuel drum. This was due to the lack of skilled labor and the lack of ability to stage a fuel cache between McMurdo Station and the PIG camp (required due to the extreme distance between McMurdo Station's airfield and the location of the PIG camp).

During the 2014-2105 austral summer season, the priority will be to remove the hazardous waste drum at the PIG field camp to McMurdo Station, where it will be removed from the continent.

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50-321 and 50-366; NRC-2008-0585]

Southern Nuclear Operating Company, Inc.; Edwin I. Hatch Nuclear Plant, Units 1 and 2; Exemption

1.0 Background

The Southern Nuclear Operating Company, Inc. (SNC, the licensee) is the holder of the Renewed Facility Operating License Nos. DPR-57 and NPF-5 which authorize operation of the Edwin I. Hatch Nuclear Plant, Units 1 and 2 (HNP). The licenses provide, among other things, that the facility is subject to the rules, regulations, and orders of the U.S. Nuclear Regulatory Commission (NRC) now or hereafter in effect.

The HNP facility consists of two boiling-water reactors located in Appling County, Georgia.

2.0 Request/Action

Pursuant to § 50.12 of Title 10 of the *Code of Federal Regulations* (10 CFR), Specific Exemptions, SNC has, by letter dated April 23, 2013, requested an exemption from the fuel cladding material requirements in 10 CFR 50.46, "Acceptance criteria for emergency core cooling systems [ECCS] for light-water nuclear power reactors," and Appendix K to 10 CFR Part 50, "ECCS Evaluation Models," (Appendix K).

The SNC's letter of April 23, 2013, constitutes the licensee's second request for an exemption from the above fuel cladding material requirements in order to irradiate two GE14 Lead Test Assemblies (LTAs) in the HNP. The LTAs include a limited number of fuel rods manufactured with an advanced cladding alloy, known as Global Nuclear Fuel (GNF) Ziron, which is outside of the cladding materials specified in the regulations (i.e. zircaloy or ZIRLO™). By letter dated November 7, 2008, the NRC approved an earlier SNC request for an exemption in order to irradiate these two GE14 LTAs in the HNP Unit 2 reactor for cycles 21, 22 and 23. These two LTAs have now completed operation in cycles 21 and 22; however, SNC decided not to include them in the Unit 2 cycle 23 core loading in order to allow sufficient time to perform pool-side inspections. Since the original exemption request applied only to the operation of the LTAs in the Unit 2 reactor for cycles 21-23, SNC has requested a second exemption in order to continue irradiation of the LTAs in either of the HNP reactors for one or more additional cycles, up to GNF's approved peak pellet exposure.
