

- What are the potential changes in agronomic practices, including crop rotation and weed management practices (e.g., herbicide use, tillage), for control of weeds in rotational crops that may occur with the use of these herbicide-resistant crops? What are the current and potentially effective strategies for management of herbicide-resistant weeds in crops? What are the costs associated with these practices and strategies?

Comments that identify other issues or alternatives that should be considered for examination in the EIS would be especially helpful. All comments received during the scoping period will be carefully considered in developing the final scope of the EIS. Upon completion of the draft EIS, a notice announcing its availability and an opportunity to comment on it will be published in the **Federal Register**.
