k. This application has been accepted, and is ready for environmental analysis at this time.

l. The existing operating project was built in 1960 and has been furnishing electric power to the Cinnamon ranch since that time. The project consists of: (1) Two existing diversion flumes; (2) a 5,940-foot-long penstock; (3) a powerhouse containing a turbine and generator for a total installed capacity of 150 kilowatts; (4) a 5,176-foot-long, 12 kilovolt transmission line and (5) appurtenant facilities. The applicant proposes no changes to the project facilities or operations. The project is estimated to generate an average of 421,184 kilowatt-hours annually.

The existing project operates run-of-river, with no peaking capabilities. Two small diversions, one on Birch Creek and one on Middle Creek provide water through open ditches to a 3.57-acre-foot de-silting pond. In the de-silting pond, a screened stand pipe functions as the intake for the 12-inch-diameter, 5,940-foot-long steel penstock. Water from the turbine tailrace is delivered directly into the Cinnamon Ranch irrigation system.
