SUPPLEMENTARY INFORMATION: Children may be more susceptible to environmental hazards than adults. Their nervous, immune, digestive, and other systems are still developing and their ability to metabolize or inactivate toxicants may be different than adults. They eat more food, drink more fluids, and breathe more air in proportion to their weight than adults, and their behavior—such as crawling and placing objects in their mouths—may result in greater exposure to environmental contaminants.

Examples of environmental health hazards that may affect children include: (1) Air pollutants, both indoor and ambient; (2) toxic chemicals such as lead, mercury, arsenic, organochlorines such as polychlorinated biphenyls, and dioxins; (3) endocrine disruptors; (4) environmental tobacco smoke; (5) ultraviolet radiation; (6) water pollution; (7) pesticides; (8) brominated flame retardants; (9) radon; and (10) carbon monoxide. Many environmental health problems can be prevented, managed, and treated. EPA encourages communities, citizens, and organizations to become leaders in protecting our children from environmental health hazards.
