

All documents (original and eight copies) should be filed with: Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

k. *Description of Request:* The Alabama Power Company (APC) is requesting a temporary variance of the minimum flow requirement of the project license in order to resume a study of the effects of minimum flow reductions on aquatic resources, including the federally endangered Tulotoma snail, *Tulotoma magnifica*. Flow reductions are being studied because of a worsening drought in the Coosa Basin, rated "exceptional," the most severe category recognized by the U.S. Drought Monitoring Program.

The project license requires a flow release of 2,000 cfs July 1 through March 31. Study flow reductions were originally approved in a July 18, 2007 Commission order. The July 18, 2007 approval allowed a reduction to 1,000 cfs, made in 250-cfs increments. The licensee and resource agencies would assess habitat conditions downstream of Jordan Dam at each flow increment. However, in mid-August, when study flows were 1,600 cfs, high water temperatures caused concerns for the Tulotoma snail, and the study was suspended.

With seasonal water temperatures decreasing, the licensee now proposes to resume the study, based on resource agency consultations and written concurrences. Flow releases would be reduced over a period of 6 days, to 1,600 cfs, by October 1. A target flow of 1,600 cfs, within +/- 5 percent, would be maintained until December 1, 2007, unless a 7-day inflow of at least 2,000 cfs occurs, in which case flow releases would be increased to 2,000 cfs. The licensee would hold weekly teleconferences with the resource agencies regarding the study and flows, and would produce aerial photographs of the downstream area at the reduced flow rate.
