Discussion

This proposed AC provides guidance material to support Type Certificate (TC) and Supplemental Type Certificate (STC) Holder compliance with proposed rulemaking title 14 Code of Federal Regulations (14 CFR) 25.1823, Supplemental Structural Inspections, Holders of type certificates—Repairs; 14 CFR 25.1825, Supplemental Structural Inspections, Holders of type certificates—Alterations and repairs to alterations; 14 CFR 25.1827, Supplemental Structural Inspections, Holders of and applicants for a Supplemental type certificate—Alterations and repairs to alterations. These proposed regulations would require TC Holders and STC Holders to develop damage tolerance data that would support operator compliance with 14 CFR 121.1109 and 14 CFR 129.109, the Aging Airplane Safety Final Rule (AASFR) (currently found at §§ 121.370(a) and 129.16) with respect to repairs and alterations. Sections 121.370(a) and 129.16 require operators of certain transport airplane models to incorporate into their maintenance program damage tolerance-based inspections and procedures for structure susceptible to fatigue cracking that could contribute to a catastrophic failure. The proposed AC refers to that type of structure as fatigue critical structure. The proposed AC is applicable to repairs and alterations that affect fatigue critical structure.

The proposed AC also provides guidance for new and existing repairs and alterations made to the original, as delivered, airplane structural configuration, as well as repairs to alterations. For compliance with § 121.1109 and § 129.109, operators will need to demonstrate that new and existing repairs and alterations will have an evaluation and damage
