SUPPLEMENTARY INFORMATION: This project would collect egg bearing female lobsters to examine the impact of endocrine disrupting chemicals on lobster larva development. The University of Connecticut submitted a complete EFP application on May 1, 2019.

If the EFP is approved, this study would take place from May to September 2019. The EFP would authorize participating vessels to collect up to 18 female egg-bearing lobsters from Lobster Conservation Management Areas 2 and 3. The lobsters collected for this study would range in weight from 1.5-4.5 lb (0.68-2.41 kg). Fishermen would ship the lobsters overnight to a researcher at the Marine Biological Laboratory in Woods Hole, MA. The researcher would transfer the lobsters to a holding tank to conduct further analysis of blood samples for the presence of endocrine disruptors and monitor larval development. The researcher will return surviving lobsters to the ocean following the experiments.

If approved, the applicant may request minor modifications and extensions to the EFP throughout the study period. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: May 24, 2019.
