

tuberoinfundibular peptides of 39 residues (TIP39), also described in this invention, which binds to a related receptor. Deletion of amino acids from the N-terminus of TIP39 resulted in the high affinity PTH1 receptor antagonist peptide described here. This peptide may be used therapeutically to treat excessive blood calcium caused by PTH or PTHrP, other pathology caused by PTHrP, to demonstrate the utility of parathyroid hormone receptor antagonism in the treatment of hypercalcemia or other conditions, or to help screen for other antagonists at the parathyroid hormone receptor.

Dated: November 29, 2000.

Jack Spiegel,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.
