

DEPARTMENT OF COMMERCE**International Trade Administration****Cornell University, et al.; Application(s) for Duty-Free Entry of Scientific Instruments**

Pursuant to Section 6(c) of the Educational, Scientific and Cultural Materials Importation Act of 1966 (Pub. L. 89–651, as amended by Pub. L. 106–36; 80 Stat. 897; 15 CFR part 301), we invite comments on the question of whether instruments of equivalent scientific value, for the purposes for which the instruments shown below are intended to be used, are being manufactured in the United States.

Comments must comply with 15 CFR 301.5(a)(3) and (4) of the regulations and be postmarked on or before February 16, 2021. Address written comments to Statutory Import Programs Staff, Room 3720, U.S. Department of Commerce, Washington, DC 20230. Please also email an identical copy of any written comments to Dianne.Hanshaw@trade.gov. Similarly, requests by the public to examine applications should be emailed to Dianne.Hanshaw@trade.gov.

Docket Number: 20–010. Applicant: Cornell University, Department of Materials Science and Engineering, Carpenter Hall, 313 Campus Road, Ithaca, NY 14853. Instrument: Six-axes sample manipulator for ample resolved photoemission. Manufacturer: Fermi Instruments, China. Intended Use: According to the applicant, the instrument will be used to fabricate on site new material and to study their electronic properties with several experimental techniques. Angle resolved photoemission (ARPES) will be the main one, as it conveys directly most information needed on the electronic structure of the material, *e.g.*, whether it is conducting/insulating/superconducting anisotropic, close to an electronic instability, likely to undergo an electronic transition, etc. According to the applicant, this is of great importance for fundamental physics, but in a longer-term perspective, also in order to identify the potential of materials for applications, in particular in energy production, conversion and storage. The ARPES set up, as well as, the molecular beam epitaxy station for materials fabrication, will be used as a facility for internal and external users, which will have to submit proposals and apply for time to perform their experiments. Justification for Duty-Free Entry: According to the applicant, there are no instruments of the same general category manufactured in the United

States. Application accepted by Commissioner of Customs: August 6, 2020.

Docket Number: 12–011. Applicant: Cornell University, Department of Materials Science and Engineering, Carpenter Hall, 313 Campus Road, Ithaca, NY 14853. Instrument: Multi-gas lamp for angle-resolved photoemission. Manufacturer: Fermi, China. Intended Use: According to the applicant, the instrument will be used to fabricate on site new material and to study their electronic properties with several experimental techniques. Angle resolved photoemission (ARPES) will be the main one, as it conveys directly most information needed on the electronic structure of the material, *e.g.*, whether it is conducting/insulating/superconducting anisotropic, close to an electronic instability, likely to undergo an electronic transition, etc. According to the applicant, this is of great importance for fundamental physics, but in a longer-term perspective, also in order to identify the potential of materials for applications, in particular, in energy production, conversion and storage. The excitation source is a key element of any photoemission setup. It provides a beam of light which is directed to the sample and causes the emission of the electrons, object of the measurement. For angle-resolved photoemission, the standard excitation source is a helium (He) gas discharge lamp, which excites He atoms and emits light caused by the de-excitation process. It is widely used in many laboratories and sold by a few companies in the world. Justification for Duty-Free Entry: According to the applicant, there are no instruments of the same general category manufactured in the United States. Application accepted by Commissioner of Customs: August 10, 2020.

Docket Number: 20–012. Applicant: University of Minnesota, Department of Chemical Engineering and Materials Science, 421 Washington Avenue SE, Minneapolis, MN 55455. Instrument: Spark Plasma Sintering Systems. Manufacturer: SUGA Co., Ltd., Japan. Intended Use: According to the applicant, the instrument will be used to study a variety of structural ceramic and metal materials including refractory alloys (*e.g.*, containing combinations of Nb, Ta, W, Mo, Zr, Hf, etc.), oxide ceramics such as $Gd_2Zr_2O_7$, $(Y_5Al_3O_{12})$, and $Y_2Si_2O_7$, and non-oxide ceramics such as SiC and Si_3N_4 . The instrument will also be used to study the sintering or consolidation behavior of these materials and will be used to prepare dense specimens to be analyzed using other instruments. The research focuses

on the development of materials with improved performance in extreme environments. The instrument will be used to generate dense specimens of the materials described above, which will subsequently be tested using other methods to determine their performance in oxidizing or corrosive environments. A key aspect of the investigations involved rapid consolidation in order to achieve high density while limiting grain growth associated with longer exposures to high temperature used in other sintering techniques. Justification for Duty-Free Entry: According to the applicant, there are no instruments of the same general category manufactured in the United States. Application accepted by Commissioner of Customs: August 11, 2020.

Dated: January 21, 2021.

Richard Herring,

Director, Subsidies Enforcement, Enforcement and Compliance.

BILLING CODE 3510–DS–P

BUREAU OF CONSUMER FINANCIAL PROTECTION**Supervisory Highlights, Covid–19 Prioritized Assessments Special Edition, Issue 23 (Winter 2021)**

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Supervisory Highlights.

SUMMARY: The Bureau of Consumer Financial Protection (Bureau) is issuing its twenty-third edition of Supervisory Highlights. This is a special edition of *Supervisory Highlights* that details the Bureau's Prioritized Assessment (PA) work. PA observations are described in the areas of mortgage, auto and student loan servicing, credit card account management, consumer reporting-furnishing, debt collection, deposits, prepaid cards, and small business lending. The report does not impose any new or different legal requirements, and all observations described in the report are based only on those specific facts and circumstances noted during those PAs.

DATES: The Bureau released this edition of the Supervisory Highlights on its website on January 19, 2021.

FOR FURTHER INFORMATION CONTACT: Jaclyn Sellers, Counsel, at (202) 435–7449. If you require this document in an alternative electronic format, please contact CFPB_Accessibility@cfpb.gov.
