

activities in the Sacramento-San Joaquin Delta, California.

This project examines predation by introduced fishes and native resident fishes on migrating native fishes across a variety of habitats and migration corridors in the northern Sacramento-San Joaquin Delta. Results provide information on spatial and environmental patterns of predation; critical information for guiding future restoration projects on conditions likely to support or discourage higher predation rates on endangered and native fishes. Sampling is conducted April, June and December in the Sacramento River above Rio Vista, Georgiana, Steamboat, Miner, and Cache sloughs, and the Sacramento Deep Water Ship Channel. Predators are sampled using trammel nets, with the goal of genetically analyzing gut contents for the DNA of various prey items. While listed species are not the target of the sampling program, incidental take may occur and will provide valuable information on abundance, habitat use, and migration timing.

CDWR is requesting a modification of Permit 16543. The proposed changes include; an additional monitoring site at Liberty Island in the Sacramento-San Joaquin Delta and an increase in juvenile, sub-adult, and adult SDPS green sturgeon take across all locations. Incidental mortality estimates will remain at zero.

The monitoring carried out under Permit 16543 represents the initial field effort for a brand new project. The take estimates for SDPS green sturgeon for Permit 16543 was purely an estimate based on the expectation that SDPS green sturgeon densities are very low in the region. However, preliminary monitoring attempts by CDWR were met with higher than anticipated catches of SDPS green sturgeon. Given the paucity of information on the location and behavior of SDPS green sturgeon in the Delta, continued sampling will provide new data on the movements and locations of SDPS green sturgeon and further assist NMFS and other agencies in their management of this species.
