IV. Background

A. Purpose of the Meeting

The purpose of this meeting is to seek the SAP's comments on the regulatory applicability of the local lymph node assay (LLNA). The LLNA is a test method for assessing the allergic contact dermatitis (skin sensitization) potential of chemicals and compounds. The assay was found to be scientifically valid by an Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM) external peer review as an alternative to traditional guinea pig tests (e.g., Buehler test and Guinea Pig Maximization test). It was also found to provide animal welfare advantages.

In 1996, the SAP gave approval to the incorporation of the LLNA in the Agency's harmonized OPPTS test guidelines (e.g., 870.200 Skin Sensitization) as a screening method. The Agency has now revised its harmonized OPPTS test guidelines to incorporate the LLNA for use as a stand alone method for assessing skin sensitization potential under the appropriate circumstances. These revisions and details of how the LLNA is proposed to fit into both EPA, Office of Pesticide Programs and EPA, Office of Pollution Prevention and Toxics evaluations of skin sensitization will be presented to the SAP for comment.

B. Panel Report

The Panel will prepare a report of its recommendations to the Agency in approximately 60 days. The report will be posted on the FIFRA SAP web site or may be obtained by contacting the PIRIB at the address or telephone number listed in Unit I.

II. Background

The Inert Disclosure Stakeholder Workgroup was established to advise the EPA, through the PPDC, on potential measures to increase the availability to the public of information about inert ingredients (also called "other ingredients") under FIFRA. Among the factors the workgroup has been asked to consider in preparing its recommendations are: Existing law regarding inert ingredients and CBI; current Agency processes and policies for disseminating inert ingredient information to the public, including procedures for the protection of CBI; informational needs for a variety of stakeholders; and business reasons for limiting the disclosure of inert ingredient information.

The Inert Disclosure Stakeholder Workgroup is composed of participants from the following sectors: Environmental/public interest and consumer groups; industry and pesticide users; Federal, State, and local governments; the general public; academia and public health organizations.

The Inert Disclosure Stakeholder Workgroup meeting is open to the public. Written public statements are also welcome and should be submitted to the OPP Docket. Any person who wishes to file a written statement can do so before or after the conference call. These statements will become part of the permanent file and will be provided to the Workgroup members for their information. If you have any questions about the workgroup, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

II. Receipt of Requests to Cancel and Amend Registrations to Delete Uses*A. Background*

In a memorandum of agreement ("Agreement") effective June 7, 2000,

EPA and the basic manufacturers of the active ingredient chlorpyrifos agreed to several voluntary measures that will reduce the potential exposure to children associated with chlorpyrifos containing products. EPA initiated the negotiations with registrants after finding chlorpyrifos, as currently registered, was an exposure risk especially to children. As a result of the Agreement, registrants that hold the pesticide registrations of end-use products containing chlorpyrifos (who are in large part the customer of these basic manufacturers) have asked EPA to cancel or amend their registrations for these products. Pursuant to section 6(f)(1) of the FIFRA, EPA announced the Agency's receipt of these requests from the registrants on June 27, 2001 (66 FR 34184) (FRL-6780-6). With respect to the registration amendments, the registrants have asked EPA to amend end-use product registrations to delete the following uses: All termite control uses (these will be phased out); all residential uses (except for ant and roach baits in child resistant packaging (CRP) and fire ant mound drenches for public health purposes by licensed applicators and mosquito control for public health purposes by public health agencies); all indoor non-residential uses (except ship holds, industrial plants, manufacturing plants, food processing plants, containerized baits in CRP, and processed wood products treated during the manufacturing process at the manufacturing site or at the mill); all outdoor non-residential sites (except golf courses, road medians, industrial plant sites, fence posts, utility poles, railroad ties, landscape timbers, logs, pallets, wooden containers, poles, posts, processed wood products, manhole covers, underground utility cable conduits, and fire ant mound drenches for public health purposes by licensed applicators and mosquito control for public health purposes by public health agencies). In addition, the companies agreed to limit the maximum chlorpyrifos end-use dilution to 0.5% active ingredient (a.i.) for termiticide uses that will be phased out, limit the maximum label application rate for outdoor non-residential use on golf courses, road medians, and industrial plant sites to 1 lb a.i./per acre, and either classify all new/amended chlorpyrifos products (except baits in CRP) as Restricted Use or package the products in large containers, depending on the formulation type, to ensure that remaining chlorpyrifos products are not available to homeowners. In return, EPA stated that with this Agreement, it had no current intention to initiate any
