SUPPLEMENTARY INFORMATION:

I. Background

A program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles is essential to protect miners from explosions. Effective and frequent rock dust application is necessary to protect miners from the potential of a float coal dust explosion or, if one occurs, to reduce its propagation. Section 75.400-2 requires that mine operators establish and maintain a "program for regular cleanup and removal of accumulations of coal and float coal dusts, loose coal, and other combustibles." In addition, the cleanup program must be available to the Secretary or authorized representative.

II. Desired Focus of Comments

MSHA is soliciting comments concerning the proposed information collection related to Cleanup Program for Accumulations of Coal and Float Coal Dusts, Loose Coal, and Other Combustibles. MSHA is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;
- Evaluate the accuracy of MSHA's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other
