

common mechanism of toxicity with other substances or how to include this pesticide in a cumulative risk assessment. For the purposes of this tolerance action, EPA has not assumed that chlorothalonil has a common mechanism of toxicity with other substances.

E. Safety Determination

1. *U.S. population.* The acute and chronic aggregate exposure estimates are well below the aRfD of 0.583 mg/kg-bw/day and cRfD of 0.020 mg/kg-bw/day for all population subgroups. Aggregate cancer exposure estimates for the U.S. population were approximately 67% of the one-in-a-million exposure limit. Based on this information, Syngenta Crop Protection concludes, that there is reasonable certainty that no harm will result from acute, chronic, or cancer exposure to chlorothalonil.

2. *Infants and children.* Since the acute chronic aggregate exposure assessments for infants and children are well below the aRfD and cRfD of 0.583 mg/kg-bw/day and 0.02 mg/kg-bw/day respectively, there is reasonable certainty that no harm will result to infants and children from aggregate exposure to chlorothalonil residues.

F. International Tolerances

There is currently no maximum residue level (MRL) set for chlorothalonil on snow peas by the Codex Alimentarius Commission.
