Amendment 49 to the Snapper Grouper FMP

The Council is considering adjusting catch levels for greater amberjack in response to the most recent stock assessment for the species in the region. The stock assessment results indicated the stock is not overfished and is not undergoing overfishing. The South Atlantic Council's Scientific and Statistical Committee (SSC) has recommended new acceptable biological catch (ABC) levels based on the latest stock assessment, which incorporated updated recreational data based on NOAA Fisheries' Marine Recreational Information Program Fishing Effort Survey. Thus, the Council is considering changes to the South Atlantic greater amberjack total annual catch limit and sector allocations. The Council is also considering removal of all recreational annual catch targets for species managed under the FMP that are

currently not being used in management.

During the webinar scoping meetings, Council staff will present an overview of the amendment and will be available to answer questions. Members of the public will have an opportunity to go on record to provide their comments for consideration by the Council.
