

smoke-free workplace and promote the non-use of all tobacco products. In addition, Public Law 103–227, the Pro-Children Act of 1994, prohibits smoking in certain facilities (or in some cases, any portion of the facility) in which regular or routine education, library, day care, health care, or early childhood development services are provided to children. This is consistent with the HHS mission to protect and advance the physical and mental health of the American people.

Dated: January 18, 2013.

Yvette Roubideaux,

Director, Indian Health Service.

National Institutes of Health

Submission for OMB Review; Comment Request: National Institutes of Health Information Collection Forms To Support Genomic Data Sharing for Research Purposes

AGENCY: PHS, DHHS, National Institutes of Health (NIH).

ACTION: Request for comments

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below. This proposed information collection was previously published in the **Federal Register** on October 5, 2012 (77 FR 61008), and allowed 60 days for public comment. No public comments were received. The purpose of this notice is to allow an additional 30 days for public comment. NIH may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after

October 1, 1995, unless it displays a currently valid OMB control number.

Proposed Collection: Title: National Institutes of Health Information Collection Forms to Support Genomic Data Sharing for Research Purposes; **Type of Information Collection Request:** New; **Need and Use of Information Collection:** The NIH mission is to seek fundamental knowledge about the nature and behavior of living systems and the application of that knowledge to enhance health, lengthen life, and reduce the burdens of illness and disability. The sharing of research data supports this mission and is essential to facilitate the translation of research results into knowledge, products, practices, and procedures that improve human health.

By enabling secondary research questions to be addressed, data sharing maximizes the public benefit achieved through research investments. NIH's *Policy for Sharing of Data Obtained in NIH Supported or Conducted Genome-Wide Association Studies (GWAS)* was established to enable the full value of GWAS data to be realized. GWAS data are maintained in a central data repository, the database of Genotypes and Phenotypes (dbGaP), which is administered by the National Center for Biotechnology Information (NCBI), part of the National Library of Medicine at NIH.

As stipulated in the NIH GWAS Policy, all principal investigators (PIs) who receive NIH funding to conduct genomic research are expected to register studies with genomic data in dbGaP. The nature of the genomic, phenotypic, and other associated data generated through large-scale human genomic studies requires responsible stewardship throughout research and data sharing activities. Since the data being collected and shared are from human research participants, the protection of participant interests is paramount. PIs submitting data to dbGaP must describe any limitations on sharing the data, as defined in the

informed consent provided by the participants from whom the data were originally collected. PIs must also provide basic study information such as the type of data that will be submitted to dbGaP and a description of the study.

Researchers interested in using dbGaP data for secondary research must submit a request through dbGaP and be granted permission from the relevant NIH Data Access Committees to access the data. As part of the request process, researchers must provide information such as a description of the proposed research use of the dbGaP datasets, a data security plan, and a Data Use Certification, in which the researcher agrees to the terms and conditions for use of the data. NIH has developed online forms, which will be available through dbGaP, in an effort to reduce the burden for researchers to complete the study registration, data submission, and data access processes.

Frequency of Response: As necessary.

Description of Respondents: PIs and senior officials from their institutions.

Estimate of Burden: The burden associated with this information collection is calculated in two parts: (1) the burden associated with registering genomic studies and submitting data to dbGaP and (2) the burden associated with applying for genomic data in dbGaP. The annual reporting burden for study registration and data submission is as follows: *Estimated Number of Respondents:* 100; *Estimated Number of Responses per Respondent:* 1; and *Estimated Total Annual Burden Hours Requested:* 63. The annual cost to respondents is estimated at \$2,506. The annual reporting burden for applying for genomic data in dbGaP is as follows: *Estimated Number of Respondents:* 1,266; *Estimated Number of Responses per Respondent:* 2; and *Estimated Total Annual Burden Hours Requested:* 1,583. The annual cost to respondents is estimated at \$63,452. There are no capital, operating, or maintenance costs to the respondents.

Type of respondent	Estimated number of respondents	Estimated number of responses per respondent	Average burden per response (in hours)	Estimated total annual burden hours
Study Registration and Data Submission:				
PI	50	1	45/60	38
Senior Official	50	1	30/60	25
Total	100	63
Data Access Request:				
PI	633	2	45/60	950
Senior Official	633	2	30/60	633
Total	1,266	1,583

Request For Comments: Written comments and/or suggestions from the public and affected agencies should address one or more of the following points: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, OIRA_submission@omb.eop.gov or by fax to 202-395-6974, Attention: Desk Officer for NIH. To request more information on the proposed project or to obtain a copy of the data collection plans and instrument, contact: Sarah Carr, Acting Director, Office of Clinical Research and Bioethics Policy, Office of Science Policy, NIH, 6705 Rockledge Drive, Suite 750, Bethesda, MD 20892; telephone 301-496-9838; fax 301-496-9839; or email GWAS@od.nih.gov, Attention: Ms. Carr.

Comment Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30 days of the date of this publication.

Dated: January 18, 2013.

Sarah Carr,

Acting Director, Office of Clinical Research and Bioethics Policy, Office of Science Policy, National Institutes of Health.

Government-Owned Inventions; Availability for Licensing

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: The inventions listed below are owned by an agency of the U.S. Government and are available for licensing in the U.S. in accordance with 35 U.S.C. 207 to achieve expeditious commercialization of results of federally-funded research and development. Foreign patent applications are filed on selected inventions to extend market coverage for companies and may also be available for licensing.

FOR FURTHER INFORMATION CONTACT: Licensing information and copies of the U.S. patent applications listed below may be obtained by writing to the indicated licensing contact at the Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, Maryland 20852-3804; telephone: 301-496-7057; fax: 301-402-0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Novel Derivatives of Docosahexaenoylethanolamide as Therapeutics for Neuronal Disorders

Description of Technology: This technology provides derivatives of Docosahexaenoylethanolamide (synaptamide or DEA) which have increased potency and hydrolysis resistance as compared to DEA (structures of these derivatives are available upon request), as well as methods of using these derivatives to promote neurogenesis, neurite growth, and/or synaptogenesis. Docosahexaenoic acid (DHA), an n-3 polyunsaturated fatty acid that accumulates in the brain during development, has been shown to play a key role in learning and memory development. Studies have also shown that DEA, a metabolite derived from DHA is very potent in accelerating neuronal growth and development. The inventors have discovered that the novel DEA derivatives they have designed are even more potent than DEA or DHA in accelerating neuronal growth, synaptogenesis and development. The inventors have shown that treatment of progenitor neural cells with some of these novel DEA derivatives leads to an increase in the amount of somatic neurons produced after differentiation. These novel compounds can be developed as therapeutics for conditions such as trauma, stroke, multiple sclerosis, Alzheimer's disease, brain and spinal cord injuries, and peripheral nerve injuries for rehabilitation.

Potential Commercial Applications:

- Agents to promote neurogenesis, neurite growth, and synaptogenesis.
- Therapeutics for neurological conditions, such as traumatic brain injury, spinal cord injury, peripheral nerve injury, stroke, multiple sclerosis, autism, Alzheimer's disease, Huntington's disease, Parkinson's disease, and amyotrophic lateral sclerosis.

Competitive Advantages: These derivatives of DEA provide increased potency and hydrolysis resistance compared to DEA.

Development Stage:

- Prototype.
 - Early-stage.
 - Pre-clinical.
 - In vitro data available.
- Inventors: Erika Englund (NCATS), Juan Marugan (NCATS), Samarjit Patnaik (NCATS), Hee-Yong Kim (NIAAA)
