

the water heater's design precludes testing it in accordance with the provisions in the current test procedure. The Department has determined that the relevant basic models of water heaters that are the subject of the application for waiver can be tested under the current test procedure. AGA agrees with this conclusion; it stated that there is nothing that prevents American's water heater from being tested under the current test procedure, and that test results would accurately predict energy consumption under the behavioral assumptions inherent in the test procedure (namely, the amount of water required and the temperature at which that water is needed). Accordingly, the petitioner has not met the criterion in 10 CFR 430.27 (l) that the basic model contains one or more design characteristics that prevent testing according to the prescribed test procedures.

Conclusion

Following a careful consideration of all the material that was submitted by American, the comments received, and based on the criteria for granting a waiver as provided in 10 CFR 430.27 (l), it is ordered that no waiver will be granted.

Issued in Washington, DC, on December 14, 2004.

David K. Garman,

Assistant Secretary, Energy Efficiency and Renewable Energy.
