l. *Description of Request:* Eugene Water & Electric Board proposes to install an electrical load bank rather than a turbine bypass valve to minimize spill from Smith Dam and protect habitat improvement measures in the Smith Bypassed Reach. Construction of the load bank will allow for the continuous use of the Carmen Power Plant during transmission line outages to convey the required minimum flow of 800 cubic feet per second (cfs) into Trail Bridge Reservoir rather than the Smith Bypassed Reach. The load bank will dissipate electricity produced at the Carmen Power Plant equivalent to the 800 cfs required to be diverted from the Smith Bypassed Reach to protect public health and the environment against spill

events from Smith Dam. In addition, the licensee's request proposes clerical and minor substantive edits to various sections of the Aquatics Management Plan in Exhibit B of the license order to reflect the load bank alternative.
