

The railroad is purchasing 14 new bi-level electric passenger MU's and the braking software being provided by the manufacturer only partly meets the above requirements. The railroad requests that an application of only emergency brakes in the event of a loss of power, or failure (hardware and software), of the friction brake control unit be allowed in lieu of either the requirement for a full service brake application or restoration of direct manual control of the primary braking system to the operator.

The 14 new electric MU locomotives are being built by Sumitomo Corporation of America/Nippon Sharyo and the air brake system is provided by Knorr Brake Corporation, Westminster, Maryland. The railroad explains in their petition that the full service brake application is transmitted electronically to each MU's Friction Brake Control Unit (FBCU). The FBCU then provides the requested brake application without drawing down brake pipe pressure. An Emergency Magnetic Valve (EMV) is provided on each MU for an electronic emergency brake application. During normal operations, the EMVs are energized in the closed position and any loss of power or software malfunction causes the EMVs to open and vent to atmosphere causing the brakes over the entire consist to apply at an emergency rate.

Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with Part 211 of Title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Burlington Junction Railway

[Waiver Petition Docket Number FRA-2008-0133]

The Burlington Junction Railway (BJRY) located in Burlington, Iowa, has petitioned FRA to grant a waiver of compliance from 49 CFR part 223, *Railroad Locomotive Safety Glazing Standards*, for one locomotive, specifically locomotive number BJRY 8711. BJRY 8711 is used primarily in switch service for an industrial park next to the city of Rochelle, Illinois, which has a population of approximately 8,000 people. They operate over three (3) miles of track and the surrounding area is composed of

warehousing and underdeveloped rural agriculture fields. There are also three (3) grade crossings within the industrial park and BJRY operates at a speed not exceeding ten (10) miles per hour. The cost of replacing the existing glazing with FRA Type I or Type II safety glazing would impose an extreme financial burden.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.
