Those individuals requesting a hearing should set forth the specific reasons why a

hearing on this particular modification request would be appropriate.

Comments may also be submitted by e-mail. The mailbox address for providing e-mail comments is *NMFS.Pr1Comments@noaa.gov*. Include in the subject line of the e-mail comment the following document identifier: File No. 1596-02.

FOR FURTHER INFORMATION CONTACT:
Patrick Opay, (301) 713-2289.

SUPPLEMENTARY INFORMATION: The subject modification to Permit No. 1596-01, issued on August 21, 2008, is requested under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR 222-226).

Permit No. 1596-01 authorizes the permit holder to capture, measure, weigh, blood and tissue sample, photograph, flipper and PIT tag, satellite tag, and attach a VHF/TDR/sonic tag/video system to leatherback sea turtles during research activities conducted off the western coast of the continental United States. The permit holder requests authorization to annually fat biopsy and ultrasound up to 38 leatherback sea turtles as part of a health and nutritional assessment of this species. The permit holder also requests authority to close approach and attach VHR/TDR/sonic tag/GPS/video camera units by suction cup on up to 20 leatherback sea turtles annually, and to later capture the same animals to remove the unit and then sample, tag, and attach another VHR/TDR/sonic tag/GPS/video camera unit to the animals before release. Additionally, the permit holder requests authorization to annually attach a VHR/TDR/sonic tag/GPS unit and tissue sample 20 leatherback sea turtles using a biopsy pole. The permit currently authorizes researchers to attach the unit or tissue sample 20 animals, not both. The number of leatherback sea turtles captured would not increase under the modification, but the mix of activities conducted on each animal would. The research would continue to occur in waters off the coast of the western United States through February 1, 2012.

Dated: May 5, 2009.

Chief, Permits, Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service.

The research would collect scientific data on sea turtles incidentally captured in the Hawaii Deep-Set Longline Fishery, the Hawaii Shallow-Set Longline Fishery, and the American Samoa Longline Fishery. This data would assist NMFS efforts to understand sea turtle interactions with the fisheries and to mitigate their threat to these species. The applicant proposes to flipper tag, measure, photograph, tissue sample, and attach satellite tags to an anticipated annual take of up to 46 loggerhead, 16 leatherback, one green, and four olive ridley sea turtles captured in the Hawaii Deep-Set Longline Fishery. The applicant proposes to flipper tag, measure, photograph, tissue sample, and attach satellite tags to an anticipated annual take of up to six loggerhead, one leatherback, six green, six olive ridley, and six hawksbill sea turtles captured in the American Samoa Longline Fishery. The applicant proposes to flipper tag, measure, photograph, tissue sample, and attach satellite tags to an anticipated annual take of up to six (18 over three years) loggerhead, 13 (39 over three years) leatherback, seven (21 over three years) green, and 41 (123 over three years) olive ridley sea turtles captured in the Hawaii Shallow-Set Longline Fishery. The research would occur in the Pacific Ocean through April 1, 2015. No mortalities are expected from the research. Researchers would also collect sea turtle carcasses of animals killed in fishery activities that occur in the Pacific Ocean.
