

This application claims use of suppressive oligonucleotides to suppress lung inflammation. More specifically, the application claims use of suppressive oligonucleotides for the treatment, prevention, or inhibition of pneumonia, ARDS, and chronic bronchitis.

Applications: Vaccine adjuvants, production of vaccines, immunotherapeutics.

Development Status: Preclinical studies have been performed; oligonucleotides have been synthesized.

Inventors: Dennis Klinman (FDA/CBER; NCI) and Hiroshi Yamada (CBER/FDA).

Patent Status: U.S. Provisional Application No. 60/417,263 filed 08 Oct 2002 (HHS Reference Number E-183-2002/0-US-01); U.S. Patent Application No. 10/682,130 filed 07 Oct 2003 (HHS Reference Number E-183-2002/0-US-02).

Licensing Status: Available for exclusive or nonexclusive licensing.

Licensing Contact: Peter A. Soukas, J.D.; 301-435-4646; soukasp@mail.nih.gov.

Collaborative Research Opportunity: The National Cancer Institute, Laboratory of Experimental Immunology, Immune Modulation Group, is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize this technology. Please contact John D. Hewes, Ph.D. at 301-435-3121 or hewesj@mail.nih.gov for more information.

Method of Treating and Preventing Infections in Immunocompromised Subjects With Immunostimulatory CpG Oligonucleotides

Description of Technology: Primary disorders of the immune system can be divided into four categories, (1) disorders of the humoral immunity, (2) disorders of cellular immunity, (3) disorders of phagocytes, and (4) disorders of complement. In addition, there are many causes of secondary immunodeficiency such as treatment with immunosuppressive or chemotherapeutic agents, protein-losing enteropathy, and infection with a human immunodeficiency virus (HIV). Generally, immunocompromised patients are unable to mount an immune response to a vaccine or an infection in the same manner as non-immunocompromised individuals.

Opportunistic infections to which individuals infected with HIV are susceptible include bacterial infections such as salmonellosis, syphilis and neurosyphilis, tuberculosis (TB), a

typical mycobacterial infection, and bacillary angiomatosis (cat scratch disease), fungal infections such as aspergillosis, candidiasis (thrush, yeast infection), coccidioidomycosis, cryptococcal meningitis, and histoplasmosis, protozoal infections such as cryptosporidiosis, isosporiasis, microsporidiosis, Pneumocystis Carinii pneumonia (PCP), and toxoplasmosis, viral infections such as Cytomegalovirus (CMV), hepatitis, herpes simplex (HSV, genital herpes), herpes zoster (HZV, shingles), human papilloma virus (HPV, genital warts, cervical cancer), Molluscum Contagiosum, oral hairy leukoplakia (OHL), and progressive multifocal leukoencephalopathy (PML), and neoplasms such as Kaposi's sarcoma, systemic non-Hodgkin's lymphoma (NHL), and primary CNS lymphoma, among others. These opportunistic infections remain principally responsible for the morbidity and mortality associated with HIV disease.

This application claims use of immunostimulatory D-type CpG oligonucleotides for the treatment of immunocompromised individuals. More specifically, the application claims use of immunostimulatory D-type CpG oligonucleotides for the treatment of individuals infected with HIV.

Application: Vaccine adjuvants, production of vaccines, immunotherapeutics.

Development Status: Preclinical studies have been performed; oligonucleotides have been synthesized.

Inventors: Dennis Klinman (FDA/CBER; NCI) and Daniela Verthelyi (FDA/CBER).

Patent Status: U.S. Provisional Application No. 60/411,944 filed 18 Sep 2002 (HHS Reference No. E-153-2002/0-US-01); U.S. Patent Application No. 10/666,022 filed 17 Sep 2003 (HHS Reference No. E-153-2002/0-US-03).

Licensing Status: Available for exclusive or nonexclusive licensing.

Licensing Contact: Peter A. Soukas, J.D.; 301-435-4646; soukasp@mail.nih.gov.

Collaborative Research Opportunity: The National Cancer Institute, Laboratory of Experimental Immunology, Immune Modulation Group, is seeking statements of capability or interest from parties interested in collaborative research to further develop, evaluate, or commercialize this technology. Please contact John D. Hewes, PhD at 301-435-3121 or hewesj@mail.nih.gov for more information.

Dated: May 15, 2008.

Steven M. Ferguson,

Director, Division of Technology Development and Transfer, Office of Technology Transfer, National Institutes of Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Notice of Meeting; Chairpersons, Boards of Scientific Counselors for Institutes/Centers at the NIH

Notice is hereby given of a meeting scheduled by the Deputy Director for Intramural Research at the National Institutes of Health (NIH) with the Chairpersons of the Boards of Scientific Counselors. The Boards of Scientific Counselors are advisory groups to the Scientific Directors of the Intramural Research Programs at the NIH. This meeting will take place on June 30, 2008, from 10 a.m. to 3 p.m., at the NIH, 1 Center Drive, Bethesda, MD, Building 1, Wilson Hall. The meeting will include a discussion of policies and procedures that apply to the regular review of NIH intramural scientists and their work, with special emphasis on clinical research.

The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should contact Ms. Colleen Crone at the Office of Intramural Research, NIH, Building 1, Room 160, Telephone (301) 496-1921 or FAX (301) 402-4273 in advance of the meeting.

Dated: April 30, 2008.

Raynard S. Kington,

Deputy Director, NIH.
