

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant

economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures” prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

T-415 WRNGL, AK to Gulkana, AK [New]

WRNGL, AK	WP	(Lat. 61°28′54.40″ N, long. 143°59′24.23″ W)
GRYNE, AK	WP	(Lat. 61°33′21.59″ N, long. 144°15′00.78″ W)
DUYZI, AK	WP	(Lat. 61°45′00.59″ N, long. 144°46′01.75″ W)
GULKANA, AK (GKN)	VOR/DME	(Lat. 62°09′13.51″ N, long. 145°26′50.51″ W)

15 CFR Part 774

[Docket No. 211019–0212]

RIN 0694–AI41

Request for Comments Concerning the Imposition of Export Controls on Certain Brain-Computer Interface (BCI) Emerging Technology

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Advance notice of proposed rulemaking (ANPRM).

SUMMARY: The Bureau of Industry and Security (BIS) maintains controls on the export, reexport and transfer (in-country) of dual-use items and less sensitive military items pursuant to the Export Administration Regulations, including the Commerce Control List (CCL). Certain items that could be of potential concern for export control purposes are not yet listed on the CCL or controlled multilaterally, because they are emerging technologies. Among

these items is Brain-Computer Interface (BCI) technology, which includes, *inter alia*, neural-controlled interfaces, mind-machine interfaces, direct neural interfaces, and brain-machine interfaces. BIS is seeking public comments on the potential uses of this technology, particularly with respect to its impact on U.S. national security (*e.g.*, whether such technology could provide the United States, or any of its adversaries, with a qualitative military or intelligence advantage). This document also requests public comments on how to ensure that the scope of any controls that may be imposed on this technology would be effective (in terms of protecting U.S. national security interests) and appropriate (with respect to minimizing their potential impact on legitimate commercial or scientific applications).

DATES: Comments must be received by BIS no later than December 10, 2021.

ADDRESSES: You may submit comments, identified by *regulations.gov* docket number BIS–2021–0032 or by RIN 0694–AI41, through any of the following:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. You can find this advance notice of proposed rulemaking by searching for its *regulations.gov* docket number, which is BIS–2021–0032.

- **Email:** PublicComments@bis.doc.gov. Include RIN 0694–AI41 in the subject line of the message.

All filers using the portal or email should use the name of the person or

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11F, Airspace Designations and Reporting Points, dated August 10, 2021, and effective September 15, 2021, is amended as follows:

Paragraph 6011 United States Area Navigation Routes.

* * * * *

entity submitting the comments as the name of their files, in accordance with the instructions below. Anyone submitting business confidential information should clearly identify the business confidential portion at the time of submission, file a statement justifying nondisclosure and referring to the specific legal authority claimed, and provide a non-confidential submission.

For comments submitted electronically containing business confidential information, the file name of the business confidential version should begin with the characters “BC.” Any page containing business confidential information must be clearly marked “BUSINESS CONFIDENTIAL” on the top of that page. The corresponding non-confidential version of those comments must be clearly marked “PUBLIC.” The file name of the non-confidential version should begin with the character “P.” The “BC” and “P” should be followed by the name of the person or entity submitting the comments or rebuttal comments. Any submissions with file names that do not begin with a “P” or “BC” will be assumed to be public and will be made publicly available through <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: For questions on Brain-Computer Interface technology, contact Dr. Betty Lee, Chemical and Biological Controls Division, Office of Nonproliferation and Treaty Compliance, Bureau of Industry and Security, U.S. Department of Commerce, (202) 482–5817, Email:

Betty.Lee@bis.doc.gov. For questions on the submission of comments, contact Willard Fisher, Regulatory Policy Division, Office of Exporter Services, Bureau of Industry and Security, U.S. Department of Commerce, (202) 482-6057, Email: RPD2@bis.doc.gov.

SUPPLEMENTARY INFORMATION:

Background

As part of the National Defense Authorization Act (NDAA) for Fiscal Year 2019, Public Law 115-232, Congress enacted the Export Control Reform Act of 2018 (ECRA), 50 U.S.C. 4801-4852. Section 1758 of ECRA (as codified under 50 U.S.C. 4817) authorizes the Bureau of Industry and Security (BIS) to establish appropriate controls on the export, reexport or transfer (in-country) of emerging and foundational technologies. Pursuant to ECRA, on November 19, 2018, BIS published an advance notice of proposed rulemaking (November 19 ANPRM) (83 FR 58201). That ANPRM identified Brain-Computer Interface (BCI) technology as part of a representative list of technology categories concerning which BIS, through an interagency process, sought public comment to determine whether there are specific emerging technologies that are essential to U.S. national security and for which effective controls can be implemented.

Comments to the November 19 ANPRM on Brain-Computer Interface Technology

In response to its November 19 ANPRM, BIS received approximately 13 comments related to the potential designation of BCI technology as an emerging technology. The substance of these comments is summarized in the following paragraphs.

One respondent noted that BCI technology, although still in the early stages of development, is currently available in Wassenaar Arrangement participating countries (including the United States), as well as in other countries.

Similarly, another respondent indicated that emerging BCI technology has important applications in human health care and assistive technologies and that, consequently, overly broad export controls on such technology could hinder research in these areas. In addition, a respondent in the aerospace sector stated that overly broad export controls would discourage information sharing and thereby hinder BCI research and development projects in the aerospace industry. This respondent also urged that license exceptions should apply to those situations

involving technological collaboration with our allies.

Another respondent noted that the imposition of export controls on the representative general categories of technology (including BCI technology) identified in BIS's November 19 ANPRM would impact the fields of automotive development (*e.g.*, autonomous driving and automotive safety), artificial intelligence, advanced materials development, human-machine interfaces and robotics. This respondent expressed the concern that the imposition of overly strict export controls on such technology by the United States could drive future research and development programs to other technologically sophisticated countries in Europe, Asia and the Americas that would not impose unilateral export controls on such technology. As examples of the possible adverse effect of export controls on such technology, this respondent cited the impact that the tightening of export controls had on the U.S. commercial satellite sector and on LiDAR controlled under ECCN 6A001 or ECCN 6A008.j.2.

One respondent urged that U.S. export controls on BCI technology be addressed through the establishment of harmonized multilateral controls. Otherwise, the imposition of export controls on such technology by the United States could adversely impact future collaboration with our allies (*e.g.*, foreign companies might become reluctant to utilize U.S.-origin BCI products or technology if they were subject to unilateral export controls). This respondent also recommended that the United States view its national security interests more narrowly, observing that the United States likely would lose credibility in multilateral export control forums if it tried to tie its national security and economic security interests too closely together. This respondent also asked whether these controls would be applied, across-the-board, to all countries or if they would vary depending upon the country of destination. In addition, the respondent inquired as to whether the *de minimis* provisions in the Export Administration Regulations (EAR) would apply, how often the United States would evaluate and update the scope of these emerging technology controls, and what additional measures (*i.e.*, other than obtaining export or reexport licenses) U.S. companies and non-US entities would be expected to take in order to protect such technology.

Another respondent also warned about the potential harm to U.S. technological leadership and competitiveness if the United States

were to impose broad unilateral controls on emerging technologies (including BCI technologies), instead of working with our allies to develop and implement multilateral controls. This respondent stressed that any export controls that are imposed on emerging technologies must apply only to those emerging technologies that are determined to be essential to U.S. national security (*e.g.*, export controls on such technologies should address specific U.S. national security concerns, rather than trade policy issues). In addition, this respondent urged that emerging technologies should not be controlled unless they are exclusive to the United States and encompass only core technologies. This respondent also recommended that U.S. controls should focus primarily on technology required for "development," rather than technology for "production" or "use." This respondent further urged that, to the extent possible, any future EAR controls on emerging technologies should be designed to complement the existing controls on the Commerce Control List and the EAR definitions that apply to similar items, and not be described in vague terms (*e.g.*, as capable for use with one or more specified items).

One respondent observed that the digital information field of BCI technology is quite mature and that, consequently, digital information technologies should remain unencumbered for the free exchange and cross-pollination of advancements across borders. In a similar vein, another respondent stated that, if export controls on quantum computing and BCI technologies were not properly crafted, these controls could damage U.S. competitiveness and undermine U.S. technological leadership by slowing development, limiting resources, reducing market participation and limiting collaborative opportunities. This respondent emphasized that, in developing and implementing export controls on such technologies, an effective partnership among government, industry and academia would be essential.

Process To Identify and Control Emerging Technology

Under ECRA, emerging and foundational technologies are those essential to the national security of the United States, but not described in Section 721(a)(6)(A)(i)-(v) of the Defense Production Act of 1950 (50 U.S.C. 4565(a)), as amended. Section 1758(a) of ECRA (50 U.S.C. 4817(a)) outlines an interagency process for identifying emerging and foundational

technologies. This process considers both public and classified information, as well as information from the Emerging Technology Technical Advisory Committee and the Committee on Foreign Investment in the United States. In identifying specific emerging technologies, this process also takes into account all of the following:

- The development of the emerging technologies in foreign countries;
- The effect export controls might have on the development of the emerging technologies in the United States; and
- The effectiveness of export controls on limiting the proliferation of the emerging technologies in foreign countries.

In addition, Section 1758(a)(2)(C) of ECRA (50 U.S.C. 4817(a)(2)(C)) requires that the interagency process for identifying emerging technologies include a notice and comment period.

The Secretary of Commerce must establish appropriate controls on the export, reexport or transfer (in-country) of technology identified pursuant to the Section 1758 process. In so doing, the Secretary must consider the potential end-users and end-users of emerging and foundational technologies, and the countries to which exports from the United States are restricted (e.g., embargoed countries). While the Secretary has discretion to set the level of export controls, at a minimum a license must be required for the export of such technologies to countries subject to a U.S. embargo, including those countries subject to an arms embargo.

BCI technology has been identified as a technology for evaluation as a potential emerging technology, consistent with the interagency process described in Section 1758 of ECRA. Consequently, BIS is publishing this ANPRM to obtain feedback from the public and U.S. industry concerning whether such technology could provide the United States, or any of its adversaries, with a qualitative military or intelligence advantage.

Fundamentally, BCIs provide a direct communication pathway between an enhanced or wired brain and an external device, with bidirectional information flow.¹ BCIs frequently involve a process in which brain signals are acquired, analyzed and then translated into commands that are: (1) Used to control machines; (2) potentially transferred to other humans; or (3) used for human assessment or enhancement. Medical

uses of BCI technology include replacing or restoring useful function to people disabled by neuromuscular disorders such as amyotrophic lateral sclerosis, cerebral palsy, stroke, or spinal cord injury.

BCI technology can also be a promising interaction tool for the public, with many potential applications in multimedia, entertainment and other fields. This technology will also have potential for military use in enhancing the capabilities of human soldiers, including collaboration for improved decision making, assisted-human operations, and advanced manned and unmanned military operations.²

Although the ability to apply BCI technology remains subject to certain limitations (e.g., approximately 15–30% of individuals currently are thought to be unable to produce brain signals robust enough to operate a BCI), the scientific community is addressing these limitations through strategies such as: (1) An adaptive machine learning approach that incorporates neurophysiological and psychological traits; and (2) the development of more advanced sensors (e.g., a coordinated network of independent, wireless microscale neural sensors that are able to gather data from much larger groups of brain cells than most current BCI systems).

Request for Comments

Consistent with Section 1758(a)(2)(C) of ECRA (50 U.S.C. 4817(a)(2)(C)), this ANPRM provides the public with notice and the opportunity to comment for the purpose of evaluating BCI technology as an emerging technology. Consequently, BIS welcomes comments on this ANPRM that would address, but not necessarily be limited to, the following questions. If specific BCI systems are discussed as part of any response to these questions, the public is requested to address the effectiveness of such systems (e.g., with respect to validation, assessment, detection of errors and ability to operate, as intended, for all types of individuals).

(1) What specific uniform standards for BCI technology would need to be adopted to ensure their application on a global basis (i.e., as international standards for BCI technology)?

(2) Where does the development of BCI in the United States stand with respect to other countries (e.g., is the United States on the forefront of BCI technology development)?

(3) Is BCI technology currently available for commercial use in certain foreign countries and, if so, where and for what specific purposes (e.g., have foreign companies already developed devices or chips for specific commercial applications)?

(4) Has the current stage of development with respect to invasive and/or non-invasive BCI technology reached the point at which such technology is ready for commercial production and use?

(5) Is the main progress with respect to non-invasive brain signal sensors being made in terms of real-time algorithms designed to transform neural signals into commands (i.e., what is developing faster: “software” (algorithms) or hardware (sensors))?

(6) What impact would the establishment of export controls on BCI technology have on U.S. technological leadership (i.e., not only in the field of BCI technology, but overall) and would this impact be distinctly different if controls were placed primarily on “software” as opposed to hardware, or *vice versa*?

(7) How is the future development of artificial intelligence (AI) technology or other emerging technologies likely to impact the development of BCI technology, or *vice versa*?

(8) What types of ethical or policy issues are likely to arise from the use of BCI technology (e.g., for medical or military purposes)?

(9) What kinds of risks and benefits currently exist, or are likely to arise, as a result of the application of BCI technology?

(10) What are the potential advantages or disadvantages of using invasive and non-invasive BCI chips/sensors and related “software” (e.g., algorithms for signal processing) for specific applications? To what extent would these advantages or disadvantages correspond (or differ) based upon whether invasive or non-invasive BCI chips/sensors and related “software” were being used?

(11) Are there any BCI technologies that are significantly more vulnerable than others to cybersecurity threats (e.g., military systems employing BCI technologies that could adversely impact U.S. biodefense)?

(12) What is the potential for transmitted BCI data to be hacked or manipulated to influence the user or machine? Is such data inherently more vulnerable to hacking or manipulation than other forms of data? Would the invasive or non-invasive characteristics of BCI data have any impact on the potential vulnerability of such data?

¹ Krucoff, M.O., Rahimpour, S., Slutzky, M.W., Edgerton, V.R., Turner, D.A. (2016), “Enhancing Nervous System Recovery through Neurobiology, Neural Interface Training, and Neurorehabilitation,” *Neuroprosthetics*, 10 (584).

² Binnendijk, A., Marler, T., Bartels, E.M. (2019), “Brain-Computer Interfaces: U.S. Tactical Military Applications and Implications,” RAND Report RR-2996-CGRS.

In addition to public comments that would assist BIS in evaluating the status of BCI technology as an emerging technology, BIS encourages comments that would help it to determine:

(1) Which aspects of BCI technology would be more likely to require monitoring by the U.S. Government (USG); and

(2) Whether specific USG policies and regulations, as well as industry standards, need to be established before this technology becomes widely available for use in commercial applications.

BIS also welcomes comments concerning whether export controls on BCI technology should be implemented multilaterally (rather than unilaterally), in the interest of increasing their effectiveness and minimizing their impact on U.S. industry. As noted above, a number of respondents who commented on BIS's November 19 ANPRM indicated their preference for multilateral export controls over unilateral export controls, because the former typically place U.S. industry on a more level playing field versus producers/suppliers in other countries. In this regard, note that Section 1758(c) of ECRA (as codified under 50 U.S.C. 4817(c)) provides that "the Secretary of State, in consultation with the Secretary [of Commerce] and the Secretary of Defense, and the heads of other Federal agencies, as appropriate, shall propose that any technology identified pursuant to subsection (a) [of ECRA] be added to the list of technologies controlled by the relevant multilateral export control regimes." Subsection (a) of section 1758 (as codified under 50 U.S.C. 4817(a)) addresses the interagency process for identifying emerging technologies.

BIS also encourages comments that address issues raised in the November 19 emerging technology ANPRM public comments (as summarized above) and any other BCI technology topics that they consider to be relevant to this inquiry. The information provided by the respondents in response to this ANPRM will assist BIS in evaluating BCI as a potential emerging technology for the purpose of formulating export control policies that will be both effective and appropriate, with respect to their objective and scope.

Comments should be submitted to BIS as described in the **ADDRESSES** section of this ANPRM and must be received by BIS no later than December 10, 2021.

This rule has been designated a "significant regulatory action," although not economically significant, under Executive Order 12866. Accordingly, this rule has been reviewed by the

Office of Management and Budget (OMB).

Matthew S. Borman,
Deputy Assistant Secretary for Export Administration.

BILLING CODE 3510-33-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R05-OAR-2021-0441; FRL-9160-01-R5]

Air Plan Approval; Michigan; Base Year Emissions Inventory for the 2010 Sulfur Dioxide Standard

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve, under the Clean Air Act (CAA), revisions to the State Implementation Plan (SIP) submitted by the Michigan department of Environment, Great Lakes, and Energy (EGLE) on June 30, 2021. The revisions address the emission inventory requirements for the St. Clair County nonattainment area under the 2010 sulfur dioxide (SO₂) National Ambient Air Quality Standard (NAAQS or standard). The CAA requires states to develop and submit, as SIP revisions, emission inventories for all areas designated as nonattainment for any NAAQS.

DATES: Comments must be received on or before November 26, 2021.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R05-OAR-2021-0441 at <http://www.regulations.gov> or via email to blakley.pamela@epa.gov. For comments submitted at [Regulations.gov](https://www.regulations.gov), follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from [Regulations.gov](https://www.regulations.gov). For either manner of submission, EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (i.e.,

on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Emily Crispell, Environmental Scientist, Control Strategies Section, Air Programs Branch (AR-18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 353-8512, crispell.emily@epa.gov. The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID-19.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever "we," "us," or "our" is used, we mean EPA.

I. The 2010 SO₂ NAAQS Emissions Inventory Requirements

On June 22, 2010, EPA promulgated a revised 1-hour SO₂ NAAQS of 75 parts per billion (ppb) (75 FR 35520). On September 12, 2016 the partial St. Clair County area was designated as nonattainment (St. Clair nonattainment area) for the 2010 1-hour SO₂ NAAQS. The St. Clair nonattainment area is defined by the St. Clair River for the eastern boundary, an extension from the St. Clair River directly west to the intersection of State Highway M-29 and St. Clair River Drive, continuing west on State Highway M-29 to Church Road to Arnold Road to County Line Road for the southern boundary, County Line Road and the Macomb/St. Clair County boundary to Stoddard Road to Wales Ridge Road for the western boundary, and Alpine Road to Fitz Road to Smith Creek Road to Range Road to Huron Avenue, extending directly east from the intersection of Huron Road and River Road to the St. Clair River for the northern boundary (83 FR 1098, January 9, 2018).

CAA section 172(c)(3), 42 U.S.C. 7502(c)(3), requires states to develop and submit, as SIP revisions, emission inventories for all areas designated as nonattainment for any NAAQS. An emission inventory for SO₂ is an estimation of actual emissions of sulfur oxides (SO_x) in an area. SO₂ is the component of greatest concern and is used as the indicator for the larger group of gaseous SO_x. SO₂ is a gas that is formed by the burning of fossil fuels by
