

a non-self-righting watercraft into a self-righting watercraft.

(2.) An aquatic rescue vehicle formed by adding directional and speed controls to a watercraft along with an autonomous control system to guide the vehicle to specified waypoints is disclosed. The rescue vehicle includes search devices such as a radio direction finder (RDF) and an infrared sensor (or camera) to be used to narrow the search for an isolated person (IP). The rescue vehicle may be discharged from a larger watercraft or an airplane and autonomously set out on its rescue mission. The vehicle may first navigate to a designated waypoint near an IP, and then use signals gathered from the RDF and infrared sensor to finally locate, assist, and retrieve the IP. The vehicle also includes a self-righting mechanism so that the vehicle can complete its mission even under the most adverse conditions.

(3.) Systems for air dropping a watercraft onto a body of water and automatically releasing the watercraft from a parachute and platform used during the air drop are disclosed. The air drop platform includes: a cradle for the watercraft; restraints for holding a watercraft onto the cradle when it is being air dropped; and a releasable air drop sling rigging system that includes connections temporarily joined to the cradle for an air drop sling. The restraints are temporarily joined to the cradle by a water-activated release mechanism. The rigging system includes an additional water-activated release mechanism. The restraints and the air drop sling both release from the cradle when the cradle is at least partially immersed in water upon landing on a body of water. The systems may be part of an automated search and rescue system.

Intellectual Property

(1.) U.S. Patent Application Serial No. 17/479,108, filed on September 20, 2021, and entitled Detachable Buoyant Component for Making a Watercraft Self-Righting.

(2.) U.S. Patent Application Serial No. 17/479,167, filed on September 20, 2021, and entitled Autonomous Rescue Vehicle.

(3.) U.S. Patent Application Serial No. 18/167,113, filed on February 10, 2023, and entitled Automated Air Drop System and Automated Search and Rescue System.

The Department of the Air Force may grant the prospective license unless a timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing

regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.

Authority: 35 U.S.C. 209; 37 CFR 404.
