

behavioral changes that occurred; and (f) re-contact permission status. At the end of the call and once the counselor deems the intervention to be complete, counselors will ask all appropriate callers, using the MI/SP Caller Initial Script, for permission to be re-contacted by research staff for a follow-up interview. Only a caller whose call has been silently monitored is eligible to be followed by the research team; thus, counselors will state that the caller *may* be contacted by the research team if randomly selected for a follow-up call. A total of 1,110 calls will be monitored across the 3-year data collection period.

(3) Counselors will be asked to complete the "MI/SP Counselor Follow-up Questionnaire" for each call that is monitored. The questionnaire will incorporate an assessment of the outreach, telephonic follow-up and/or other strategies that the center has proposed to implement, and whether the counselor was able to implement the

center's site plan as originally conceived. The questionnaire will also include items on the demographic characteristics of the caller, whether contact was successfully made with the caller, whether the caller followed through with the safety plan and/or referral given by the counselor, whether MI/SP was re-implemented during the follow-up contact, whether another follow-up is scheduled, the educational and crisis experience of the person attempting re-contact with the caller, and that person's prior experience with follow-up. Barriers to implementing the follow-up, as well as types of deviation from the site's follow-up plan will also be assessed. Open-ended questions about what led to deviations from the site's follow-up plan will also be included. In total, it is expected that counselors will complete the questionnaire for each of the calls that were monitored.

(4) Researchers will begin conducting follow-up interviews with callers approximately 6 weeks after the initial call to the center. This follow-up telephone interview ("MI/SP Caller Follow-up Interview") will be conducted to collect information on demographic characteristics, gather caller feedback on the initial call made to the center, suicide risk status at the time of and since the call, current depressive symptomatology, follow through with the safety plan and referrals made by the crisis counselor, and barriers to service. Taking into account attrition and the number of callers who do not give consent, it is expected that the total number of follow-up interviews conducted by the research team will not exceed 885.

The estimated response burden to collect this information, annualized over the requested three year clearance period, is presented below:
