NSF routinely reviews PII in IT systems in addition to monitoring technical, physical, and administrative controls in place to assure that PII is appropriately protected. NSF's major applications and general support systems are assessed and authorized by NSF's continuous monitoring and ongoing authorization program. The authorization process requires a thorough security and privacy control review.

All NSF systems are covered by a system security plan, and major applications and general support systems are authorized to operate. Applications and devices hosted on the NSF network are subjected to extensive vulnerability scanning and compliance checking against standard security configurations. Robust virus protection capabilities, anti-malware, and network intrusion detection and prevention devices provide 24/7 protection against external threats. NSF's strong access controls ensure that resources are made available only to authorized users, programs, processes or systems by reference to rules of access that are defined by attributes and policies.

NSF uses the capabilities of a Trusted Internet Connections (TIC) compliant provider for routing agency network traffic and uses the federally provided intrusion detection system (IDS), including advanced continuous monitoring and risk management analysis. NSF has a well-established computer security incident response program. NSF's incident response procedures include a strong digital forensics capability to investigate and review data and identify relevant evidence and malicious activity.

Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

The NRC seeks public comment on the draft BTP 7-19 Revision 9, "Guidance for Evaluation of Defense In Depth and Diversity to Address Common-Cause Failure Due to Latent Design Defects in Digital Safety Systems." This draft revision BTP 7-19, provides the NRC staff with guidance for evaluating an applicant's assessment of the adequacy of D3 for a proposed DI&C system. The applicant performs this D3 assessment to identify and address potential common-cause failures (CCFs) in a proposed DI&C system and to evaluate the effects of any unprevented CCFs on plant safety.

The purpose of this proposed update is to implement the expanded policy in SRM-SECY-22-0076, "Expansion of Current Policy on Potential Common-Cause Failures in Digital Instrumentation and Control Systems," (ADAMS Accession Nos. ML23145A181 and ML23145A182) for addressing DI&C CCFs. The proposed update provides guidance for the review of risk-informed D3 assessments, in addition to the existing guidance for assessments based on best-estimate methods. The proposed update also provides review guidance for design techniques or mitigating measures, other than diversity, to address the effects of a DI&C CCF.

Following NRC staff evaluation of public comments, the NRC intends to finalize BTP 7-19, Revision 9 in ADAMS and post it on the NRC's public website at <https://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr0800>. The SRP is guidance for the NRC staff. The SRP is not a substitute for the NRC regulations, and compliance with the SRP is not required.

III. Backfitting, Forward Fitting, and Issue Finality

The guidance in this draft SRP is updated to implement the Commission's policies in SRM-SECY-22-0076 for review of applicant assessments of defense in depth and diversity to prevent or mitigate common-cause failure of digital instrumentation and control systems used in light-water nuclear power reactors. Issuance of this draft SRP, if finalized, would not constitute backfitting as defined in section 50.109 of title 10 of the *Code of Federal Regulations* (10 CFR), "Backfitting" (the Backfit Rule), and as described in NRC Management Directive (MD) 8.4, "Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests"; would not affect the issue finality of an approval under 10 CFR part 52; and would not constitute forward fitting as that term is

defined and described in MD 8.4. The NRC staff's position is based upon the following considerations.

1. The draft SRP positions, if finalized, would not constitute backfitting or forward fitting or affect issue finality, inasmuch as the SRP would be internal guidance to the NRC staff.

The SRP provides guidance to the NRC staff on how to review an application for NRC regulatory approval in the form of licensing. Changes in internal staff guidance, without further NRC action, are not matters that meet the definition of backfitting or forward fitting or affect the issue finality of a 10 CFR part 52 approval.

2. Current or future applicants are not—with limited exceptions not applicable here—within the scope of the backfitting and issue finality regulations and forward fitting policy.

Applicants are not, with certain exceptions, within the scope of the Backfit Rule or any issue finality provisions under 10 CFR part 52. The backfitting and issue finality regulations include language delineating when those provisions begin; in general, they begin after the issuance of a license, permit, or other approval. Furthermore, neither the Backfit Rule nor the issue finality provisions under 10 CFR part 52—with certain exclusions discussed further in this notice—were intended to apply to NRC actions that substantially change the expectations of current and future applicants.

The exceptions to the general principle are applicable when an applicant references a 10 CFR part 52 license (e.g., an early site permit) and/or NRC regulatory approval (e.g., a design certification rule) with specified issue finality provisions or a construction permit under 10 CFR part 50. The NRC staff does not, at this time, intend to impose the positions represented in the draft SRP (if finalized) in a manner that would constitute backfitting or affect the issue finality of a 10 CFR part 52 approval. If, in the future, the staff seeks to impose a position in the draft SRP (if finalized) in a manner that constitutes backfitting or affects the issue finality of a 10 CFR part 52 approval, then the staff would need to address the Backfit Rule, or the criteria described in the applicable issue finality provision.

The Commission's forward fitting policy generally does not apply when an applicant files an initial licensing action for a new facility. Nevertheless, the NRC staff does not, at this time, intend to impose the positions represented in the draft SRP (if finalized) in a manner that would constitute forward fitting. If, in

the future, the staff seeks to impose a position in the draft SRP (if finalized) in a manner that constitutes forward fitting, then the staff would need to address the forward fitting criteria in MD 8.4.

Dated: October 19, 2023.

Gerond A. George,

Chief, Licensing Project Branch, Division of Operating Reactors, Office of Nuclear Reactor Regulation.
