Grafton Hydro, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On October 9, 2015, Grafton Hydro, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Lebanon-Mascoma Hydroelectric Project (Lebanon-Mascoma Project or project) to be located on Mascoma River in the city of Lebanon, Grafton County, New Hampshire. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would include two developments. Development 1 would be located near the downtown section of the city of Lebanon and Development 2 would be located at the existing Mascoma Lake dam. Development 1 would consist of: (1) A new 110-foot-long, reinforced concrete dam with a 60-foot-long, bottom-hinged, operable crest spillway; (2) a new impoundment with a surface area of less than 2 acres and a normal volume of less than 10 acre-feet; (3) a 1,200-foot-long, 7-foot-diameter, steel penstock; (4) a new 40-foot-long, 30-foot-wide, reinforced concrete powerhouse containing a new 2,000-horsepower Kaplan-type turbine and a new 1,500-kilowatt (kW) synchronous generator; (5) an approximately 500-foot-long transmission line connecting the generator to a 2.0 kilovolt amps (kVA) transformer; and (6) appurtenant facilities.

Development 2 would consist of: (1) The existing 18-foot-high, 575-foot-long concrete gravity Mascoma Lake dam with four 6-foot-wide outlet gates, seven 35-foot-wide stoplog bays, and a 125-foot-long overflow spillway; (2) the existing 1,158-acre Mascoma Lake impoundment; (3) a new 40-foot-long, 30-foot-wide, reinforced concrete powerhouse containing four 150-horsepower, horizontal axis, propeller-type turbines, each with a 150-kW asynchronous generator; (4) an approximately 500-foot-long

transmission line connecting the generators to a 1.0-kVA transformer; and (5) appurtenant facilities. The estimated annual generation of the project would be 6,500 megawatt-hours. The existing Mascoma Lake dam and impoundment are owned and operated by the New Hampshire Department of Environmental Services.
