

Mexico Fishery Management Council and is implemented by NMFS under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) by regulations at 50 CFR part 622.

The final rule implementing Amendment 40 to the FMP established two components within the recreational sector fishing for Gulf red snapper: The private angling component, and the Federal for-hire component (80 FR 22422, April 22, 2015). Amendment 40 also allocated the red snapper recreational ACL (recreational quota) between the components and established separate seasonal closures for the two components. The Federal for-hire component's red snapper annual catch target (ACT) is 9 percent below the for-hire component quota (85 FR 9684, February 20, 2020; 50 CFR 622.41(q)(2)(iii)(B)). The measures in Amendment 40 were subsequently extended indefinitely through Amendment 45 to the FMP (81 FR 86971; December 2, 2016).

The red snapper for-hire component seasonal closure is projected from the component ACT. Projecting the for-hire component's seasonal closure using the ACT reduces the likelihood of the harvest exceeding the component quota and the total recreational quota.

All weights described in this temporary rule are in round weight.

The Federal for-hire component 2021 ACT for red snapper in the Gulf EEZ is 2.848 million lb (1.292 million kg) (50 CFR 622.41(q)(2)(iii)(B)).

The 2021 Federal Gulf red snapper for-hire fishing season was previously determined to be 63 days based on NMFS' projection of the date landings were expected to reach the component ACT. For details about the calculation of the projection for 2021, see <https://www.fisheries.noaa.gov/southeast/sustainable-fisheries/gulf-mexico-recreational-red-snapper-management>. NMFS previously announced in the **Federal Register** that the 2021 recreational season for the Federal for-hire component would begin at 12:01 a.m., local time, on June 1, 2021, and close at 12:01 a.m., local time, on August 3, 2021 (86 FR 15430; March 23, 2021).

However, the most recent landings data for the Gulf red snapper for-hire component plus projected landings for data that is not yet available indicate that approximately 670,113 lb (303,958 kg) of the for-hire component ACT remains. NMFS projects that this amount of the remaining ACT will be harvested in 22 days.

Therefore, in accordance with 50 CFR 622.8(c), NMFS reopens the Gulf red

snapper Federal for-hire component for 22 days to allow the component ACT to be harvested. The recreational season for the Federal for-hire component will reopen at 12:01 a.m., local time, on October 15, 2021, and close at 12:01 a.m., local time, on November 6, 2021. When the for-hire component closes again on November 6, 2021, the bag and possession limits for red snapper for Federal for-hire vessels are zero. When the Federal for-hire component is closed, these bag and possession limits apply in the Gulf on board a vessel for which a valid Federal for-hire permit for Gulf reef fish has been issued, without regard to where such species were harvested, *i.e.*, in state or Federal waters. In addition, a person aboard a vessel that has been issued a charter vessel/headboat permit for Gulf reef fish any time during the fishing year may not harvest or possess red snapper in or from the Gulf EEZ when the Federal charter vessel/headboat component is closed.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is taken under 50 CFR 622.8(c), which was issued pursuant to section 304(b) of the Magnuson-Stevens Act, and is exempt from review under Executive Order 12866, and other applicable laws.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment is unnecessary and contrary to the public interest.

Such procedures are unnecessary because the regulation at 50 CFR 622.8(c) has already has already been subject to notice and public comment, and all that remains is to notify the public that additional harvest is available under the established Federal for-hire component ACT, and therefore, the Federal for-hire component for Gulf red snapper will reopen. Such procedures are contrary to the public interest because many for-hire operations book trips for clients in advance and require as much notice as NMFS is able to provide to adjust their business plans to account for the reopening of the fishing season. Additionally, a reopening of the component in October instead of later in the fishing year is preferable because it may reduce the likelihood of encountering inclement weather that generally occurs with greater frequency later in the fishing year.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: September 30, 2021.

Jennifer M. Wallace,

[Docket No. 180117042-8884-02]

RTID 0648-XB483

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; quota transfer.

SUMMARY: NMFS is transferring 140 metric tons (mt) of Atlantic bluefin tuna (BFT) quota from the Reserve category to the General category. This action is intended to provide further opportunities for General category fishermen to participate in the October through November General category fishery, based on consideration of the regulatory determination criteria regarding inseason adjustments. This action would affect Atlantic Tunas General category (commercial) permitted vessels and Highly Migratory Species (HMS) Charter/Headboat permitted vessels with a commercial sale endorsement when fishing commercially for BFT.

DATES: Effective October 4, 2021, through November 30, 2021.

FOR FURTHER INFORMATION CONTACT:

Larry Redd, Jr., 301-427-8503, Nicholas Velseboer, 978-281-9260, or Lauren Latchford, 301-427-8503.

SUPPLEMENTARY INFORMATION: Atlantic HMS fisheries, including BFT fisheries, are managed under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*). The 2006 Consolidated Atlantic HMS Fishery Management Plan (FMP) and its amendments are implemented by regulations at 50 CFR part 635. Section 635.27 divides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) and as implemented by the United States among the various domestic

fishing categories, per the allocations established in the 2006 Consolidated HMS FMP and its amendments. NMFS is required under the Magnuson-Stevens Act to provide U.S. fishing vessels with a reasonable opportunity to harvest quotas under relevant international fishery agreements such as the ICCAT Convention, which is implemented domestically pursuant to ATCA.

The baseline General and Reserve category quotas are 555.7 mt and 29.5 mt, respectively. The General category baseline subquota for the October through November time-period is 72.2 mt. Under the regulations, any unused General category quota rolls forward from one time-period to the next and is available for use in subsequent time-periods. To date for 2021, NMFS has published several actions that adjusted the Reserve category quota (86 FR 8717, February 9, 2021; 86 FR 43420, August 9, 2021; 86 FR 51016, September 14, 2021). NMFS recently also recently adjusted the Reserve category quota using the allowable underharvest from 2020 to 2021. The current adjusted Reserve category quota is 151.5 mt.

Transfer of 140 mt From the Reserve Category to the General Category

Under § 635.27(a)(9), NMFS has the authority to transfer quota among fishing categories or subcategories after considering determination criteria provided under § 635.27(a)(8). NMFS has considered all of the relevant determination criteria and their applicability to this inseason quota transfer. These considerations include, but are not limited to, the following:

Regarding the usefulness of information obtained from catches in the particular category for biological sampling and monitoring of the status of the stock (§ 635.27(a)(8)(i)), biological samples collected from BFT landed by General category fishermen and provided by tuna dealers provide NMFS with valuable parts and data for ongoing scientific studies of BFT age and growth, migration, and reproductive status. Additional opportunity to land BFT in the General category would support the continued collection of a broad range of data for these studies and for stock monitoring purposes.

NMFS also considered the catches of the General category quota to date (including during the summer/fall and winter fisheries in the last several years) and the likelihood of closure of that segment of the fishery if no adjustment is made (§ 635.27(a)(8)(ii) and (ix)). The General category October through November time-period subquota has not yet been exceeded, but without a quota transfer at this time, NMFS would likely

need to close the General category fishery shortly, and participants would have to stop BFT fishing activities while commercial-sized BFT remain available in the areas where General category permitted vessels operate at this time of year. Transferring 140 mt of quota from the Reserve category for the October through November 2021 subquota time-period would provide limited additional opportunities to harvest the U.S. BFT quota while avoiding exceeding it. NMFS also took into consideration a recently published final rule that would set restricted-fishing days for the General category during the months of September through November 2021 (86 FR 43421, August 9, 2021). That rule would further increase the likelihood that the fishery would remain open throughout the subperiod and year.

Regarding the projected ability of the vessels fishing under the General category quota to harvest the additional amount of BFT quota transferred before the end of the fishing year (§ 635.27(a)(8)(iii)), NMFS considered General category landings over the last several years and landings to date this year. Landings are highly variable and depend on access to commercial-sized BFT and fishing conditions, among other factors, such as the restrictions that some dealers placed on their purchases of BFT from General category participants this year. In the unlikely event that any of this quota is unused by November 30, such quota will roll forward to the next subquota time period within the calendar year (*i.e.*, to the December period), and NMFS anticipates that it would be used before the end of the fishing year. Thus, this quota transfer would allow fishermen to take advantage of the availability of fish on the fishing grounds and provide a reasonable opportunity to harvest available U.S. BFT quota.

NMFS also considered the estimated amounts by which quotas for other gear categories of the BFT fishery might be exceeded (§ 635.27(a)(8)(iv)) and the ability to account for all 2021 landings and dead discards. In the last several years, total U.S. BFT landings have been below the available U.S. quota such that the United States has carried forward the maximum amount of underharvest allowed by ICCAT from one year to the next. NMFS recently took such an action to carryover the allowable 127.3 mt of underharvest from 2020 to 2021. NMFS will need to account for 2021 landings and dead discards within the adjusted U.S. quota, consistent with ICCAT recommendations, and anticipates having sufficient quota to do that.

NMFS also considered the effects of the adjustment on the BFT stock and the effects of the transfer on accomplishing the objectives of the FMP (§ 635.27(a)(8)(v) and (vi)). This transfer would be consistent with established quotas and subquotas, which are implemented consistent with ICCAT recommendations (established in Recommendation 17–06 and maintained in Recommendation 20–06), ATCA, and the objectives of the 2006 Consolidated HMS FMP and amendments. In establishing these quotas and subquotas and associated management measures, ICCAT and NMFS considered the best scientific information available, objectives for stock management and status, and effects on the stock. This quota transfer is in line with the established management measures and stock status determinations. Another principal consideration is the objective of providing opportunities to harvest the available General category quota without exceeding the annual quota, based on the objectives of the 2006 Consolidated HMS FMP and its amendments, including to achieve optimum yield on a continuing basis and to allow all permit categories a reasonable opportunity to harvest available BFT quota allocations (related to § 635.27(a)(8)(x)). Specific to the General category, this includes providing opportunities equitably across all time-periods.

Given these considerations, NMFS is transferring 140 mt of the available 151.5 mt of Reserve category quota to the General category. Therefore, NMFS adjusts the General category October through November 2021 subquota to 212.2 mt and adjusts the Reserve category quota to 11.5 mt. The General category fishery will remain open until November 30, 2021, or until the adjusted General category quota is reached, whichever comes first.

Monitoring and Reporting

NMFS will continue to monitor the BFT fishery closely. Dealers are required to submit landing reports within 24 hours of a dealer receiving BFT. Late reporting by dealers compromises NMFS' ability to timely implement actions such as quota and retention limit adjustments, as well as closures, and may result in enforcement actions. Additionally, and separate from the dealer reporting requirement, General category and HMS Charter/Headboat vessel owners are required to report the catch of all BFT retained or discarded dead within 24 hours of the landing(s) or end of each trip, by accessing hmspermits.noaa.gov or by using the HMS Catch Reporting app or calling

(888) 872–8862 (Monday through Friday from 8 a.m. until 4:30 p.m.).

Depending on the level of fishing effort and catch rates of BFT, NMFS may determine that additional adjustments (e.g., quota adjustment, daily retention limit adjustment, or closure) are necessary to ensure available quota is not exceeded or to enhance scientific data collection from, and fishing opportunities in, all geographic areas. If needed, subsequent adjustments will be published in the **Federal Register**. In addition, fishermen may call the Atlantic Tunas Information Line at (978) 281–9260, or access hmspermits.noaa.gov, for updates on quota monitoring and inseason adjustments.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act and regulations at 50 CFR part 635 and is exempt from review under Executive Order 12866.

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

The regulations implementing the 2006 Consolidated HMS FMP and its amendments provide for inseason retention limit adjustments to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. Affording prior notice and opportunity for public comment to implement the quota transfer for the October through November 2021 time-period is contrary to the public interest as such a delay would likely fail to prevent the closure of the General category fishery when the baseline subquota for the October through November time-period is met and the need to re-open the fishery, with attendant costs to the fishery, including administrative costs and lost fishing opportunities. The delay would preclude the fishery from harvesting BFT that are available on the fishing grounds and that might otherwise become unavailable during a delay. This action does not raise conservation and management concerns. Transferring quota from the Reserve category to the General category does not affect the overall U.S. BFT quota, and the adjustment would have a minimal risk of exceeding the ICCAT-allocated quota. NMFS notes that the public had an

opportunity to comment on the underlying rulemakings that established the U.S. BFT quota and the inseason adjustment criteria. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For these reasons, there also is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effective date.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 201209–0332; RTID 0648–XB484]

Fisheries of the Northeastern United States; Atlantic Bluefish Fishery; Quota Transfers From VA to RI and NJ to MA

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notification; quota transfers.

SUMMARY: NMFS announces that the Commonwealth of Virginia and the State of New Jersey are transferring a portion of their 2021 commercial bluefish quota to the State of Rhode Island and the Commonwealth of Massachusetts, respectively. These quota adjustments are necessary to comply with the Atlantic Bluefish Fishery Management Plan quota transfer provisions. This announcement informs the public of the revised commercial bluefish quotas for Virginia, Rhode Island, New Jersey, and Massachusetts.

DATES: Effective September 30, 2021, through December 31, 2021.

FOR FURTHER INFORMATION CONTACT: Laura Hansen, Fishery Management Specialist, (978) 281–9225.

SUPPLEMENTARY INFORMATION: Regulations governing the Atlantic bluefish fishery are found in 50 CFR 648.160 through 648.167. These regulations require annual specification

of a commercial quota that is apportioned among the coastal states from Maine through Florida. The process to set the annual commercial quota and the percent allocated to each state is described in § 648.162, and the final 2021 allocations were published on December 16, 2020 (85 FR 81421).

The final rule implementing Amendment 1 to the Bluefish Fishery Management Plan (FMP) published in the **Federal Register** on July 26, 2000 (65 FR 45844), and provided a mechanism for transferring bluefish quota from one state to another. Two or more states, under mutual agreement and with the concurrence of the NMFS Greater Atlantic Regional Administrator, can request approval to transfer or combine bluefish commercial quota under § 648.162(e)(1)(i) through (iii). The Regional Administrator must approve any such transfer based on the criteria in § 648.162(e). In evaluating requests to transfer a quota or combine quotas, the Regional Administrator shall consider whether: The transfer or combinations would preclude the overall annual quota from being fully harvested; the transfer addresses an unforeseen variation or contingency in the fishery; and the transfer is consistent with the objectives of the FMP and the Magnuson-Stevens Act.

Virginia is transferring 20,000 lb (9,072 kg) to Rhode Island, and New Jersey is transferring 50,000 lb (22,680 kg) to Massachusetts through mutual agreement of the states. These transfers were requested to ensure that Rhode Island and Massachusetts would not exceed their 2021 state quota. The revised bluefish quotas for 2021 are: Virginia, 238,800 lb (108,318 kg); Rhode Island, 223,434 lb (101,348 kg); New Jersey, 320,082 lb (145,187 kg); and, Massachusetts, 235,904 lb (107,004 kg).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 648.162(e)(1)(i) through (iii), which was issued pursuant to section 304(b), and is exempted from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*
