SUPPLEMENTARY INFORMATION: FMVSS No. 109 specifies tire dimensions and laboratory test requirements for bead unseating resistance, strength, endurance, and high speed performance; defines tire load ratings; and specifies labeling requirements for certain types of passenger car tires.

On March 16, the Rubber Manufacturers Association informed the agency that paragraphs S5.4.2.4, S5.5, and S5.5.1 of FMVSS No. 109 were missing from the 2003 and 2004 versions of the CFR.¹ S5.4.2.4 specifies the last step of tire endurance testing. S5.5 provides the heading for high speed performance. S5.5.1 specifies the first step for high speed performance testing.

The agency examined the recent CFR amendments affecting FMVSS No. 109 and concluded that the three paragraphs have been inadvertently removed from the CFR.² Without these paragraphs, the relevant tire performance testing specifications are incomplete. This document corrects the CFR by adding the inadvertently removed paragraphs of FMVSS No. 109.

This correction will not impose or relax any substantive requirements or burdens on manufacturers. Therefore, NHTSA finds for good cause that any notice and opportunity for comment on these correcting amendments are not necessary.
