Needs and Uses: On February 28, 2020, in furtherance of the goal of releasing more mid-band spectrum into the market to support and enabling next-generation wireless networks, the Commission adopted a Report and Order, FCC 20-22, (3.7 GHz Report and Order), in which it reformed the use of the 3.7-4.2 GHz band, also known as the C-band. Currently, the 3.7-4.2 GHz band is allocated in the United States exclusively for non-Federal use on a primary basis for Fixed Satellite Service (FSS) and Fixed Service. The 3.7 GHz Report and Order calls for the relocation of existing FSS operations in the band into the upper 200 megahertz of the band (4.0-4.2 GHz) and making the lower 280 megahertz (3.7-3.98 GHz) available for flexible use throughout the contiguous United States through a Commission-administered public auction of overlay licenses that is scheduled to occur later this year.

The Commission concluded in the 3.7 GHz Report and Order that, once this transition is complete, coordination measures are needed to protect incumbent C-band operations in the upper portion of the 3.7-4.2 GHz band. 3.7 GHz Service licensees are required to comply with certain technical rules and coordination practices designed to reduce the risk of interference to incumbent operations. Specifically, 3.7 GHz Service licensees are required to comply with specific power flux density (PFD) limits to protect incumbent earth stations from out-of-band emissions and blocking and to coordinate frequency usage with incumbent Telemetry, Tracking, and Command (TT&C) earth stations. The 3.7 GHz Report and Order allows 3.7 GHz Service licensees and C-

Band earth station operators to modify these PFD limits, but it requires a 3.7 GHz Service licensee that is a party to such an agreement to maintain a copy of the agreement in its station files and disclose it, upon request, to prospective license assignees, transferees, or spectrum lessees, and to the Commission. The Commission also required any 3.7 GHz Service licensee with base stations located within the appropriate coordination distance to provide upon request an engineering analysis to the TT&C operator to demonstrate their ability to comply with the applicable -6 dB I/N criteria.

The information that will be collected under this new information collection is designed to ensure that 3.7 GHz Service licensees operate in a manner that ensures incumbent C-band operations in the upper portion of the 3.7-4.2 GHz band and TT&C operations in the 3700-3980 MHz band are protected. By requiring 3.7 GHz Service licensees to provide a copy of any private agreement with 3.7 GHz earth station operators to prospective license assignees, transferees, or spectrum lessees, and to the Commission, the Commission ensures that such agreements continue to protect incumbent C-band operations in the event a 3.7 GHz service license is subsequently transferred to a new licensee. This collection promotes the safety of operations in the band and reduces the risk of harmful interference to incumbents. It also ensures that relevant stakeholders have access to coordination agreements between 3.7 GHz Service licensees and entities operating earth stations or TT&C operations.

The information provided by the 3.7 GHz Service licensee to the TT&C operator ensures the protection of TT&C operations. The information collection will facilitate an efficient and safe transition by requiring 3.7 GHz Service licensees to demonstrate their ability to comply with the -6 dB I/N criteria, thereby minimizing the risk of interference.
