### SUPPLEMENTARY INFORMATION:

### I. Abstract

This is a request for revision and extension of a currently approved information collection.

The National Marine Fisheries Service (NMFS) Office of Science and Technology's Economics and Social Analysis Division seeks to conduct as-needed data collections to support mandated comprehensive economic and socio-economic evaluations of the fisheries in regions of the United States affected by catastrophic events. The six NMFS Fisheries Science Centers will assist in conducting the proposed collections.

The Magnuson-Stevens Fishery Conservation and Management Act (MSA) includes the following requirement (see SEC. 315 (c)), “Within 2 months after a catastrophic regional fishery disaster the Secretary [of Commerce] shall provide the Governor of each State participating in the program a comprehensive economic and socio-economic evaluation of the affected region's fisheries to assist the Governor in assessing the current and future economic viability of affected fisheries, including the economic impact of foreign fish imports and the direct, indirect, or environmental impact of the disaster on the fishery and coastal communities.” The MSA permits the proposed collection and NMFS would conduct it under the MSA.

This collection will provide information that NMFS will use to produce the comprehensive economic and socio-economic evaluation required by the MSA.

For a rapid catastrophic event, such as a hurricane, NMFS seeks to collect data on the immediate and long-term disruption and impediments to recovery of normal business practices to the commercial and recreational fishing industries, including fishing dependent businesses. In addition, for an ongoing event, such as a pandemic or red tide that lingers for many months in the same region(s), NMFS seeks to collect data quarterly to semi-annually as needed to evaluate the ongoing event. NMFS would collect the data from
