Large Residential Washers From the People's Republic of China: Continuation of the Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC) that revocation of the antidumping duty (AD) order on large residential washers (washers) from the People's Republic of China (China) would likely lead to a continuation or recurrence of dumping and material injury to an industry in the United States, Commerce is publishing a notice of continuation of the AD order on washers from China.

DATES: Applicable August 30, 2022.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Max Goldman, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1766 or (202) 482–0224, respectively.

SUPPLEMENTARY INFORMATION:

Background

On February 6, 2017, Commerce published in the *Federal Register* the AD order on washers from China.¹ On January 3, 2022, the ITC instituted² and

Commerce initiated³ a five-year (sunset) review of the *Order*, pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act). As a result of its review, Commerce determined, pursuant to sections 751(c)(1) and 752(c) of the Act, that revocation of the *Order* would likely lead to a continuation or recurrence of dumping. Therefore, Commerce notified the ITC of the magnitude of the margin of dumping likely to prevail were the *Order* to be revoked.⁴

On August 22, 2022, the ITC published its determination, that revocation of the *Order* would likely lead to a continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time, pursuant to sections 751(c) and 752(a) of the Act.⁵

Scope of the Order

The products covered by this *Order* are all large residential washers and certain parts thereof from the People's Republic of China.

For purposes of this *Order*, the term “large residential washers” denotes all automatic clothes washing machines, regardless of the orientation of the rotational axis, with a cabinet width (measured from its widest point) of at least 24.5 inches (62.23 cm) and no more than 32.0 inches (81.28 cm), except as noted below.

Also covered are certain parts used in large residential washers, namely: (1) All cabinets, or portions thereof, designed for use in large residential washers; (2) all assembled tubs⁶ designed for use in large residential washers which incorporate, at a minimum: (a) a tub; and (b) a seal; (3) all assembled baskets⁷ designed for use in large residential washers which incorporate, at a minimum: (a) a side wrapper;⁸ (b) a base; and (c) a drive hub;⁹ and (4) any combination of the foregoing parts or subassemblies.

Excluded from the scope are stacked washer-dryers and commercial washers.

³ See *Initiation of Five-Year (Sunset) Reviews*, 87 FR 76 (January 3, 2022).

⁴ See *Large Residential Washers from the People's Republic of China: Final Results of Expedited Sunset Review of Antidumping Duty Order*, 87 FR 27101 (May 6, 2022), and accompanying Issues and Decision Memorandum.

⁵ See *Large Residential Washers from China*, 87 FR 51446 (August 22, 2022).

⁶ A “tub” is the part of the washer designed to hold water.

⁷ A “basket” (sometimes referred to as a “drum”) is the part of the washer designed to hold clothing or other fabrics.

⁸ A “side wrapper” is the cylindrical part of the basket that actually holds the clothing or other fabrics.

⁹ A “drive hub” is the hub at the center of the base that bears the load from the motor.

The term “stacked washer-dryers” denotes distinct washing and drying machines that are built on a unitary frame and share a common console that controls both the washer and the dryer. The term “commercial washer” denotes an automatic clothes washing machine designed for the “pay per use” segment meeting either of the following two definitions:

(1) (a) it contains payment system electronics;¹⁰ (b) it is configured with an externally mounted steel frame at least six inches high that is designed to house a coin/token operated payment system (whether or not the actual coin/token operated payment system is installed at the time of importation); (c) it contains a push button user interface with a maximum of six manually selectable wash cycle settings, with no ability of the end user to otherwise modify water temperature, water level, or spin speed for a selected wash cycle setting; and (d) the console containing the user interface is made of steel and is assembled with security fasteners;¹¹ or

(2) (a) it contains payment system electronics; (b) the payment system electronics are enabled (whether or not the payment acceptance device has been installed at the time of importation) such that, in normal operation,¹² the unit cannot begin a wash cycle without first receiving a signal from a bona fide payment acceptance device such as an electronic credit card reader; (c) it contains a push button user interface with a maximum of six manually selectable wash cycle settings, with no ability of the end user to otherwise modify water temperature, water level, or spin speed for a selected wash cycle setting; and (d) the console containing the user interface is made of steel and is assembled with security fasteners.

Also excluded from the scope are automatic clothes washing machines that meet all of the following conditions: (1) Have a vertical rotational axis; (2) are top loading;¹³ (3) have a drive train consisting, inter alia, of (a) a permanent split capacitor (PSC)

¹⁰ “Payment system electronics” denotes a circuit board designed to receive signals from a payment acceptance device and to display payment amount, selected settings, and cycle status. Such electronics also capture cycles and payment history and provide for transmission to a reader.

¹¹ A “security fastener” is a screw with a non-standard head that requires a non-standard driver. Examples include those with a pin in the center of the head as a “center pin reject” feature to prevent standard Allen wrenches or Torx drivers from working.

¹² “Normal operation” refers to the operating mode(s) available to end users (*i.e.*, not a mode designed for testing or repair by a technician).

¹³ Top loading” means that access to the basket is from the top of the washer.
