Title: NESHAP for Chemical Recovery Combustion Sources at Kraft, Soda, Sulfite, and Stand-Alone Semichemical Pulp Mills (40 CFR part 63, subpart MM) (Renewal).

Abstract: This National Emission Standards for Hazardous Air Pollutants (NESHAP) covering emissions from chemical recovery combustion sources at kraft, soda, sulfite, and stand-alone semichemical pulp mills relies on the capture and/or reduction of HAP emissions by recovery furnaces, smelt dissolving tanks (SDTs), lime kilns, or soda or sulfite combustion units. The recordkeeping, notification and reporting requirements of the standard are critically important as they allow the Agency to determine to which facilities the standards apply and they enable the Agency to monitor initial and ongoing compliance with the standards. As much as possible, in order to reduce the burden, the compliance monitoring and recordkeeping requirements are designed to cover parameters that are already being monitored as part of the manufacturing process.

Pulp mill owners or operators (respondents) are required to submit initial notifications, maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. Respondents are required to monitor and keep records of specific operating parameters for each control device and to perform and document periodic inspections of the closed vent and wastewater conveyance systems. All respondents must submit semiannual summary reports of monitored parameters, and they must submit an additional monitoring report during each quarter in which monitored parameters were outside the ranges established in the standard or during initial performance tests. A source identified to be out of compliance with the NESHAP will be required to submit quarterly reports until the Administrator is satisfied that the source has corrected its compliance problem. These notifications, reports, and records are essential in determining compliance, and are required of all sources subject to Maximum Achievable Control Technology (MACT) standards. Since none of the required reports to the Agency have been deemed confidential business information, they will not be treated as such. Responses are

mandatory (40 CFR part 63, subpart MM).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB Control Number. The OMB Control Numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 475 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Owners or operators of pulp mills with chemical recovery combustion sources.

Estimated Number of Respondents: 130.

Frequency of Response: Initial, on occasion, quarterly, semiannually.

Estimated Total Annual Hour Burden: 150,043 hours.

Estimated Total Annual Costs: \$8,667,298, which includes \$123,000 annualized capital/startup costs, \$864,000 annual O&M costs, and \$7,680,298 annual labor costs.

Changes in the Estimates: There is an increase of 128,515 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to an improved estimate of the number of facilities and the burden for each facility.

Dated: December 4, 2004.

Oscar Morales,

Director, Collection Strategies Division.
