

shorebirds proactively to minimize their exposure to the rodenticide.

Under Alternative D, we would place bait stations containing brodifacoum bait pellets throughout the entire Atoll and maintain them until all rats are removed (or 2 years). Bait stations are box shaped enclosures with small entryways designed to attract rodents but be difficult for other species such as birds and land crabs to navigate. Bait stations reduce the amount of bait that is introduced to the ecosystem and the risk of exposing nontarget species to rodenticide. Bait stations designed for the Atoll would exclude shorebirds and land crabs, and allow easy access for rats.

The FEIS is intended to accomplish the following: (1) Inform the public of the proposed action and alternatives; (2) Address public comments received during the public comment periods; (3) Disclose the direct, indirect, and cumulative environmental effects of the proposed action and each of the alternatives; and (4) Indicate any irreversible commitment of resources that would result from project implementation. A Record of Decision stating which alternative the Service has selected for implementation will not be issued earlier than 30 days after the Environmental Protection Agency notice.

Dated: April 8, 2011.
