SUPPLEMENTARY INFORMATION: The Agency is committed to listening to stakeholders as we continuously improve the way we do business. In early 1999 the Agency held a series of stakeholder meetings to ask how we can better serve our customers. The "Aiming for Excellence" report (Report) released by Administrator Browner in July 1999 responds to key issues raised during the stakeholder meetings. EPA's commitment to develop the Annual Agency Compliance Assistance Activity Plan is one of the most ambitious actions items identified in the Report.

Objectives of the Plan are to: (1) Identify and coordinate similar activities to leverage resources; (2) provide an inventory of the Agency activities to assist stakeholders in planning their activities; and (3) seek stakeholder input on the Agency's compliance assistance priorities. The FY01 Plan is the first attempt to undertake this intra-agency planning. EPA will strive to consider stakeholder comments as we begin implementing the FY01 activities, but any major change in strategic direction would be difficult since the Agency's FY01 budget submission already includes specific projects. However, stakeholder comments will have a more significant impact on the FY02 planning and budgeting cycle that begins this spring. It is the Agency's expectation that as future (FY02 and beyond) Plans are developed, stakeholder input will influence the directions in which we focus our compliance assistance resources.

Dated: February 25, 2000.

Michael M. Stahl,

Acting Director, Office of Compliance.

Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-1998

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of document availability and request for comments.

SUMMARY: The Draft Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990-1998 is available for public review. Annual U.S. emissions for the period of time from 1990-1998 are summarized and presented by source category and sector. The inventory contains estimates of carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), Hydrofluorocarbons (HFC), perfluorocarbons (PFC), and sulfur hexafluoride (SF₆) emission. The inventory also includes estimates of carbon sequestration in U.S. forests and, new this year, estimates of soil carbon. The technical approach used in this report to estimate emissions and sinks for greenhouse gases is consistent with the methodologies recommended by the Intergovernmental Panel on Climate Change (IPCC). The Inventory of U.S. Greenhouse Gas Emissions and Sinks is the latest in a series of annual U.S. submissions to the Secretariat of the United Nations Framework Convention on Climate Change.
