SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a currently approved information collection. The groundfish tagging program provides scientists with information necessary for effective conservation, management, and scientific understanding of the groundfish fishery off Alaska and the Northwest Pacific. The program area includes the Pacific Ocean off Alaska (the Gulf of Alaska, the Bering Sea and Aleutian Islands Area, and the Alexander Archipelago of Southeast

Alaska), California, Oregon, and Washington. Fish movement information from recovered tags is used in population dynamics models for stock assessment. There are three general categories of tags. Simple plastic tags (spaghetti tags) are external tags approximately two inches long, printed with code numbers. When a tag is returned, the tag number is correlated with databases of released, tagged fish to determine the net movement and growth rate of the tagged fish. Archival tags are microchips with sensors encased in plastic cylinders that record the depth, temperature or other data, which can be downloaded electronically from the recovered tags. Pop-off satellite tags are programmed to release from the fish and upload archived data (depth, temperature, and approximate geolocation) to passing satellites, therefore data is received independent of the fishery. The groundfish tagging and tag recovery program is part of the fishery resource assessment and data collection that the National Marine Fisheries Service (NMFS) conducts under the Magnuson-Stevens Act authority as codified in 16 U.S.C. 1801(a)(8).

II. Method of Collection

This is a volunteer program requiring the actual tag from the fish to be returned, along with recovery information. Reporting forms with pre-addressed and postage-free envelopes are distributed to processors and catcher vessels.

III. Data

OMB Control Number: 0648-0276.

Form Number: None.

Type of Review: Regular submission (extension of a currently approved collection).

Affected Public: Not-for-profit institutions; State, local, or tribal government; business or other for-profit organizations.

Estimated Number of Respondents: 440.

Estimated Time per Response: 5 minutes for returning a regular tag, and 20 minutes for returning an internal archival tag.

Estimated Total Annual Burden Hours: 89.

Estimated Total Annual Cost to Public: \$30 in recordkeeping/reporting costs (if the fisherman chooses to return an electronic tag himself instead via a NMFS observer).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance

of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.
