

E. Safety Determination

1. *U.S. population.* As presented previously, the exposure of the U.S. general population to amicarbazone is low, and the risks, based on comparisons to the RfD, are minimal. The margins of safety from the use of amicarbazone are well within EPA's acceptable limits. Arvesta Corporation concludes that there is a reasonable certainty that no harm will result to the U.S. population from aggregate exposure to amicarbazone residues.

2. *Infants and children.* The complete toxicological data base, including the developmental toxicity and two-generation reproduction studies were considered in assessing the potential for additional sensitivity of infants and children to residues of amicarbazone. The developmental toxicity studies in rats and rabbits did not indicate any increased sensitivity of rats or rabbits to *in-utero* exposure to amicarbazone. The two-generation reproduction study did not reveal any increased sensitivity of rats to prenatal or postnatal exposure to amicarbazone. Furthermore, none of the other toxicology studies indicated any data demonstrating that young animals were more sensitive to amicarbazone than adult animals. The data taken collectively clearly demonstrate that application of an FQPA uncertainty for increased sensitivity of infants and children is unnecessary for amicarbazone.

F. International Tolerances

Amicarbazone is registered for use on corn and sugarcane in Brazil. The tolerance for these uses in 0.02 ppm.
