

Factor	Description	Consideration
Spatial extent of mosquito breeding habitat	The relative availability of mosquito habitat within the landscape that includes the refuge.	If the refuge is a primary breeding area for mosquitoes that likely affect human health, threshold may be lower. If refuge mosquito habitats are insignificant in the context of the landscape, thresholds may be higher.
Natural predator populations	Balanced predator-prey populations may limit mosquito production.	If refuge vertebrate and invertebrate prey populations are adequate to control mosquitoes, threshold for treatment should be high.
Type of mosquito habitat	Preferred breeding habitat for mosquitoes is species-specific.	Because breeding habitat is species-specific, correlate thresholds for each species to initiate control with appropriate habitat types.
Water quality	Water quality influences mosquito productivity.	High organic content in water may increase mosquito productivity, lower natural predator abundance, and may require lower thresholds.
Opportunities for water and vegetation management.	Management of water levels and vegetation may reduce mosquito productivity.	Thresholds for treatment should be higher where we can control mosquitoes through habitat management.
Presence/absence of vector control agency	Many areas do not have adequate human populations to support vector control. In addition, resources available for mosquito management vary among districts.	Thresholds for management may be much higher or non-existent in areas without vector control.
Accessibility for monitoring/control	Refuges may not have adequate access to monitor or implement mosquito management.	Thresholds will probably be higher for refuges with limited access that will require cost-prohibitive monitoring and treatment strategies.
History of mosquito borne diseases in area	Past monitoring of wildlife, mosquito pools, horses, sentinel chickens, and humans have documented mosquito-borne diseases.	Thresholds in areas with a history of mosquito-borne disease(s) will likely be lower.
