l. The American Falls dam and spillway are owned and operated by the Bureau of Reclamation; these features are not project facilities or contained within the project boundary. The concrete gravity dam has a structural height of 103.5 feet and a crest length of 5,277 feet, width of 42.5 feet and elevation of 4,366.5 feet.¹ The spillway has a crest elevation of 4,333 feet. Reclamation operates and manages the reservoir for irrigation delivery, power generation, flood control, fish and wildlife, and recreation benefits. The reservoir has a maximum storage capacity of 2,672,590 acre-feet and 1.7 million acre-feet of usable storage capacity. Its water surface elevation fluctuates between 4,295.7 feet and 4,354.5 feet and reservoir's maximum surface area is 58,000 acres.

Three 18-foot-diameter steel-lined penstocks begin at the dam intake and extend 300 feet downstream to the American Falls project's turbines. Reclamation's ownership and maintenance of the penstocks begins at the intake and extends downstream approximately 60 feet to the coupling pit. Idaho Power's ownership and maintenance of the penstocks begins at the coupling pit and extends downstream to the Project's turbines.

From the coupling pit, each of the project's 18-foot-diameter penstocks extend approximately 240 feet downstream to each of the project's three 22.5-megawatt (MW) Kaplan turbine-generator units contained in a reinforced concrete powerhouse. The total installed project capacity is 67.5 MW.² Water is discharged from the powerhouse directly to the Snake River.

Electricity generated at the powerhouse is transmitted to the electric grid via a switchyard upstream of the powerhouse containing a 13.8/138-kilovolt (kV) step-up transformer. From there power is transmitted over a 2,300-foot-long, 138-kV overhead transmission line to the American Falls Switchyard. The American Falls project generates an average of 395,000 megawatt-hours (MWh) annually.

¹ All elevations are National Geodetic Vertical Datum of 1929 (NGVD 29).

² See Order Amending License, Revising Project Description, Revising Annual Charges, and Approving Revised Exhibit M issued September 27, 2002. *Idaho Power Company*, 180 FERC ¶ 62,170 (2022). Following turbine maintenance that commenced in October 2022 and will extend through 2025, each of the turbines will have a rated hydraulic capacity of 4,705 cfs at 88 feet net head.
