The permit authorizes the holder to conduct research on bottlenose dolphins in the bays, sounds, estuaries, and nearshore coastal waters of Texas in the northwestern Gulf of America. The purpose of the research is to: (1) develop and maintain photo-identification catalogs; (2) characterize fine-scale population structure and dynamics; (3) establish baseline patterns of distribution, habitat use, health, and survival; (4) evaluate dolphin behavior in relation to anthropogenic activities; and (5) identify potential risks to the population. Researchers may take up to 8,670 dolphins annually during vessel surveys for counts, photo-identification, behavioral observation, and passive acoustic recordings. A subset of animals may be biopsy sampled or observed for photogrammetry and blow sampling via an unmanned aircraft system. Up to 50 non-target cetaceans may be unintentionally harassed during surveys and/or approached annually for counts and behavioral observation. The permit is valid for 10 years from the date of issuance.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), a final determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
