

the table below), the Energy Bid of each Resource is constant over its entire operating range. The day-ahead and real-time LMP throughout New England during the hour in question is \$70/MWh. None of the bids from the Resources has any start-up or minimum

load costs. The Capability-to-Service Ratio used in calculating the Regulation Service Credit for each Resource is 0.1. (ISO-NE should comment during the conference whether it is reasonable to assume that the Capability-to-Service Ratio used in selecting

Resources would be the same for all Resources.)

Assume that the 6 Resources submit the following in their bids to supply Regulation Service and Energy:

INFORMATION IN BIDS TO SUPPLY REGULATION SERVICE AND ENERGY AND DERIVED OPPORTUNITY COST, IN \$/MWH

Resource	Regulation offer	Energy bid	Derived opportunity cost
A	\$10	\$85	\$15
B	20	75	5
C	40	70	0
D	45	70	0
E	50	40	30
F	60	25	45

ISO-NE should be prepared to explain during the conference how its proposal would determine which of these Resources would be selected to provide Regulation Service, and how the Regulation Clearing Price would be determined. If additional information is also needed to determine which Resources are selected and what Regulation Clearing Price is calculated, ISO-NE should identify the information at the conference and add reasonable hypothetical values for this information to the above example.
