

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 52****[EPA-R04-OAR-2012-0555; FRL-9704-6]****Approval and Promulgation of Implementation Plans; State of Florida: New Source Review; Prevention of Significant Deterioration; Fine Particulate Matter (PM_{2.5})****AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Proposed rule.

SUMMARY: EPA is proposing to approve changes to the Florida State Implementation Plan (SIP), submitted by the Florida Department of Environmental Protection (FDEP) to EPA on March 15, 2012. The SIP revision modifies Florida's New Source Review (NSR) Prevention of Significant Deterioration (PSD) permitting program. The SIP revision adopts, into the Florida SIP, federal NSR permitting provisions to address the implementation of the fine particulate matter (PM_{2.5}) national ambient air quality standards (NAAQS) as amended in EPA's 2008 NSR PM_{2.5} Implementation Rule (hereafter referred to as the "NSR PM_{2.5} Rule") and the 2010 PM_{2.5} PSD Increment, Significant Impact Levels (SILs) and Significant Monitoring Concentration (SMC) Rule (hereafter referred to as the "PM_{2.5} PSD Increment-SILs-SMC Rule"). EPA is proposing to approve portions of Florida's SIP revision because the Agency has preliminarily determined that the changes are consistent with the Clean Air Act (CAA or Act) and EPA regulations regarding NSR permitting.

DATES: Comments must be received on or before August 27, 2012.

ADDRESSES: Submit your comments, identified by Docket ID No EPA-R04-OAR-2012-0555, by one of the following methods:

1. *www.regulations.gov*: Follow the on-line instructions for submitting comments.
2. *Email*: R4-RDS@epa.gov.
3. *Fax*: (404) 562-9019.
4. *Mail*: EPA-R04-OAR-2012-0555, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960.
5. *Hand Delivery or Courier*: Ms. Lynorae Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency,

Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

Instructions: Direct your comments to Docket ID No. EPA-R04-OAR-2012-0555 EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through *www.regulations.gov* or email, information that you consider to be CBI or otherwise protected. The *www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov*, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm*.

Docket: All documents in the electronic docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S.

Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

FOR FURTHER INFORMATION CONTACT: For information regarding the Florida SIP, contact Ms. Twunjala Bradley, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Telephone number: (404) 562-9352; email address: *bradley.twunjala@epa.gov*. For information regarding NSR, contact Ms. Yolanda Adams, Air Permits Section, at the same address above. Telephone number: (404) 562-9214; email address: *adams.yolanda@epa.gov*. For information regarding PM_{2.5} NAAQS, contact Mr. Joel Huey, Regulatory Development Section, at the same address above. Telephone number: (404) 562-9104; email address: *huey.joel@epa.gov*.

- VI. Statutory and Executive Order Reviews

I. What action is EPA proposing?

On March 15, 2012, FDEP submitted a SIP revision to EPA for approval into the Florida SIP to adopt federal requirements for NSR permitting. Florida's SIP revision makes changes to the State's Air Quality Regulations at Chapter 62-210, Florida Administrative Code (F.A.C.), *Stationary Sources—General Requirements, Section 200—Definitions (rule 62-210.200)*, and Chapter 62-212, F.A.C., *Stationary Sources—Preconstruction Review, Section 300—General Preconstruction Review Requirements (rule 62-212.300)* and *Section 400—Prevention of Significant Deterioration (rule 62-212.400)*. These rule changes were provided to comply with federal NSR permitting provisions related to the implementation of the PSD program for the PM_{2.5} NAAQS as promulgated in the NSR PM_{2.5} Rule entitled "Implementation of the New Source Review (NSR) Program for Particulate

Matter Less than 2.5 Micrometers (PM_{2.5}),” Final Rule, 73 FR 28321 (May 16, 2008) and the PM_{2.5} PSD Increment-SILs-SMC Rule entitled “Prevention of Significant Deterioration (PSD) for Particulate Matter Less Than 2.5 Micrometers (PM_{2.5})—Increments, Significant Impact Levels SILs and Significant Monitoring Concentration (SMC),” Final Rule,” 75 FR 64864, (October 20, 2010). Pursuant to section 110 of the CAA, EPA is proposing to approve into the Florida SIP these changes submitted by the State, with the exception of the SILs provisions pursuant to EPA’s PM_{2.5} PSD Increment-SILs-SMC Rule.¹ See 75 FR 64864. More details regarding SILs are summarized below in Sections III and IV.

II. What is the background for EPA’s proposed action?

Today’s proposed action to revise Florida’s SIP relates to EPA’s NSR PM_{2.5} Rule² and the PM_{2.5} PSD Increment-SILs-SMC Rule. In the NSR PM_{2.5} Rule, EPA finalized regulations to implement the NSR program for the PM_{2.5} NAAQS. As a result of EPA’s final NSR PM_{2.5} Rule, states were required to submit SIP revisions to EPA no later than May 16, 2011, to address these requirements for both the PSD and Nonattainment NSR (NNSR) programs. EPA’s PM_{2.5} PSD Increment-SILs-SMC Rule established PSD increments, SILs and SMC which address additional components for making PSD permitting determinations for the PM_{2.5} NAAQS. These requirements address air quality modeling and monitoring provisions for fine particle pollution in areas protected by the PSD program (that is, attainment or unclassifiable/attainment areas for the NAAQS). The PM_{2.5} PSD Increment-SILs-SMC Rule requires states to submit SIP revisions to adopt the required PSD increments by July 20, 2012. Promulgation of these two rules provided the framework states need to address the NSR permitting requirements for the PM_{2.5} NAAQS. Florida’s March 15, 2012, SIP revision adopts into the Florida SIP the PSD requirements promulgated in these two rules to be consistent with federal regulations for the PM_{2.5} NAAQS. More detail on the NSR PM_{2.5} Rule and the PM_{2.5} PSD Increment-SILs-SMC Rule can be found in EPA’s May 16, 2008,

and October 20, 2010, final rules, respectively, and are summarized below. See 73 FR 28321 and 75 FR 64864.

A. Fine Particulate Matter and the NAAQS

Fine particles in the atmosphere are made up of a complex mixture of components. Common constituents include sulfate; nitrate; ammonium; elemental carbon; a great variety of organic compounds; and inorganic material (including metals, dust, sea salt, and other trace elements) generally referred to as “crustal” material, although it may contain material from other sources. Airborne particulate matter (PM) with a nominal aerodynamic diameter of 2.5 micrometers or less (a micrometer is one-millionth of a meter, and 2.5 micrometers is less than one-seventh the average width of a human hair) are considered to be “fine particles” and are also known as PM_{2.5}. “Primary” particles are emitted directly into the air as a solid or liquid particle (e.g., elemental carbon from diesel engines or fire activities, or condensable organic particles from gasoline engines). “Secondary” particles (e.g., sulfate and nitrate) form in the atmosphere as a result of various chemical reactions.

The health effects associated with exposure to PM_{2.5} include potential aggravation of respiratory and cardiovascular disease (i.e., lung disease, decreased lung function asthma attacks and certain cardiovascular issues). Epidemiological studies have indicated a correlation between elevated PM_{2.5} levels and premature mortality. Groups considered especially sensitive to PM_{2.5} exposure include older adults, children, and individuals with heart and lung diseases. For more details regarding health effects and PM_{2.5} see EPA’s Web site at <http://www.epa.gov/oar/particlepollution/> (See heading “Health and Welfare”).

On July 18, 1997, EPA revised the NAAQS for PM to add new standards for fine particles, using PM_{2.5} as the indicator. Previously, EPA used PM₁₀ (inhalable particles smaller than or equal to 10 micrometers in diameter) as the indicator for the PM NAAQS. EPA established health-based (primary) annual and 24-hour standards for PM_{2.5}, setting an annual standard at a level of 15 micrograms per cubic meter (µg/m³) and a 24-hour standard at a level of 65 µg/m³. See 62 FR 38652. At the time the 1997 primary standards were established, EPA also established welfare-based (secondary) standards identical to the primary standards. The secondary standards are designed to

protect against major environmental effects of PM_{2.5}, such as visibility impairment, soiling, and materials damage. On October 17, 2006, EPA revised the primary and secondary NAAQS for PM_{2.5}. In that rulemaking, EPA reduced the 24-hour NAAQS for PM_{2.5} to 35 µg/m³ and retained the existing annual PM_{2.5} NAAQS of 15 µg/m³. See 71 FR 61236.

B. What is the NSR program?

The CAA NSR program is a preconstruction review and permitting program applicable to certain new and modified stationary sources of air pollutants regulated under the CAA. The program includes a combination of air quality planning and air pollution control technology requirements. The CAA NSR program is composed of three separate programs: PSD, NNSR, and Minor NSR. PSD is established in part C of title I of the CAA and applies in areas that meet the NAAQS (“attainment areas”) as well as areas where there is insufficient information to determine if the area meets the NAAQS (“unclassifiable areas”). The NNSR program is established in part D of title I of the CAA and applies in areas that are not in attainment of the NAAQS (“nonattainment areas”). The Minor NSR program addresses construction or modification activities that do not qualify as “major” and applies regardless of the designation of the area in which a source is located. Together, these programs are referred to as the NSR program. EPA regulations governing the implementation of these programs are contained in 40 CFR 51.160–.166; 52.21, .24; and, part 51, appendix S. Section 109 of the CAA requires EPA to promulgate a primary NAAQS to protect public health and a secondary NAAQS to protect public welfare. Once EPA sets those standards, states must develop, adopt, and submit a SIP to EPA for approval that includes emission limitations and other control measures to attain and maintain the NAAQS. See CAA section 110. Each SIP is also required to include a preconstruction review program for the construction and modification of any stationary source of air pollution to assure the maintenance of the NAAQS. The applicability of the PSD program to a major stationary source must be determined in advance of construction and is a pollutant-specific determination. Once a major source is determined to be subject to the PSD program (and thus is a “PSD source”), among other requirements, it must undertake a series of analyses to demonstrate that it will use the best available control technology and will

¹ EPA’s authority to implement the SILs and SMC for PSD purposes has been challenged by the Sierra Club. *Sierra Club v. EPA*, Case No 10–1413 United States Court of Appeals for the District of Columbia (D.C. Circuit Court).

² On November 1, 2005, EPA proposed a rule to implement the 1997 PM_{2.5} NAAQS, including proposed revisions to the NSR program. See 70 FR 65984.

not cause or contribute to a violation of any NAAQS or increment. Florida's March 15, 2012, SIP revision consists of rule amendments to adopt into Florida's PSD program provisions related to the review and control of PM_{2.5} emissions from major stationary sources and modifications.

III. What are the NSR implementation requirements for the PM_{2.5} NAAQS?

A. NSR PM_{2.5} Rule

On May 16, 2008, EPA finalized the NSR PM_{2.5} Rule to implement the PM_{2.5} NAAQS, including changes to the NSR program. *See* 73 FR 28321. The NSR PM_{2.5} Rule revised the federal NSR program requirements to establish the framework for implementing preconstruction permit review for the PM_{2.5} NAAQS in both attainment and nonattainment areas. Specifically, the NSR PM_{2.5} Rule established NSR requirements to implement the PM_{2.5} NAAQS that: (1) Require NSR permits to address directly emitted PM_{2.5} and precursor pollutants; (2) establish significant emission rates for direct PM_{2.5} and precursor pollutants (including sulfur dioxide (SO₂) and nitrogen oxides (NO_x)); (3) establish PM_{2.5} emission offsets; (4) provide exceptions to the PM₁₀ grandfathering policy; and (5) require states to account for gases that condense to form particles ("condensables") in PM_{2.5} and PM₁₀ emission limits in PSD or NNSR permits. Additionally, the NSR PM_{2.5} Rule authorized states to adopt provisions in their NNSR rules that would allow interpollutant offset trading. Florida's March 15, 2012, SIP revision addresses the PSD permitting requirements promulgated in the NSR PM_{2.5} Rule.³ A few key issues described in greater detail below include the PM₁₀ surrogate and grandfathering policy and the condensable provision.

1. PM₁₀ Surrogate and Grandfathering Policy

After EPA promulgated the NAAQS for PM_{2.5} in 1997 (62 FR 38652, July 18, 1997), the Agency issued a guidance document entitled "Interim Implementation of New Source Review Requirements for PM_{2.5}." John S. Seitz, EPA, October 23, 1997 (the "Seitz Memo"). The Seitz Memo was designed to help states implement NSR requirements pertaining to the new

PM_{2.5} NAAQS in light of technical difficulties posed by PM_{2.5} at that time. Specifically, the Seitz Memo stated: "PM-10 may properly be used as a surrogate for PM-2.5 in meeting NSR requirements until these difficulties are resolved." EPA also issued a guidance document entitled "Implementation of New Source Review Requirements in PM-2.5 Nonattainment Areas" (the "2005 PM_{2.5} NNSR Guidance") on April 5, 2005, the date that EPA's PM_{2.5} nonattainment area designations became effective for the 1997 NAAQS. The 2005 PM_{2.5} NNSR Guidance provided direction regarding implementation of the nonattainment major NSR provisions in PM_{2.5} nonattainment areas in the interim period between the effective date of the PM_{2.5} nonattainment area designations (April 5, 2005) and EPA's promulgation of final PM_{2.5} NNSR regulations. Besides re-affirming the continuation of the PM₁₀ Surrogate Policy for PM_{2.5} attainment areas set forth in the Seitz memo, the 2005 PM_{2.5} NNSR Guidance recommended that until EPA promulgated the PM_{2.5} major NSR regulations, "States should use a PM₁₀ nonattainment major NSR program as a surrogate to address the requirements of nonattainment major NSR for the PM_{2.5} NAAQS."

In the NSR PM_{2.5} Rule, EPA required that major stationary sources seeking permits must begin directly satisfying the PM_{2.5} requirements, as of the effective date of the rule, rather than relying on PM₁₀ as a surrogate, with two exceptions. The first exception is the "grandfathering" provision in the federal PSD program at 40 CFR 52.21(i)(1)(xi). This grandfathering provision applied to sources that had applied for, but had not yet received, a final and effective PSD permit before the July 15, 2008, effective date of the May 16, 2008, final rule. The second exception was that states with SIP-approved PSD programs could continue to implement the Seitz Memo's PM₁₀ Surrogate Policy for up to three years (until May 2011) or until EPA approved the individual revised state PSD programs for PM_{2.5}, whichever came first. *See* 73 FR 28321.⁴

On February 11, 2010, EPA proposed to repeal the grandfathering provision for PM_{2.5} contained in the federal PSD program at 40 CFR 52.21(i)(1)(xi) and to end early the PM₁₀ Surrogate Policy applicable in states that have a SIP-

approved PSD program. *See* 75 FR 6827. In support of this proposal, EPA explained that the PM_{2.5} implementation issues that led to the adoption of the PM₁₀ Surrogate Policy in 1997 have been largely resolved to a degree sufficient for sources and permitting authorities to conduct meaningful permit-related PM_{2.5} analyses.

On May 18, 2011 (76 FR 28646), EPA took final action to repeal the PM_{2.5} grandfathering provision at 40 CFR 52.21(i)(1)(xi). This final action ended the use of the 1997 PM₁₀ Surrogate Policy for PSD permits under the federal PSD program at 40 CFR 52.21. In effect, any PSD permit applicant previously covered by the grandfathering provision (for sources that completed and submitted a permit application before July 15, 2008)⁵ that did not have a final and effective PSD permit before the effective date of the repeal would no longer be able to rely on the 1997 PM₁₀ Surrogate Policy to satisfy the PSD requirements for PM_{2.5} unless the application included a valid surrogacy demonstration. *See* 76 FR 28646. Florida's March 15, 2012, SIP revision did not adopt the grandfathering provision at 40 CFR 52.21(i)(1)(xi), in accordance with the repeal of the PM_{2.5} grandfathering provision.

2. "Condensable" Provision

In the NSR PM_{2.5} Rule, EPA revised the definition of "regulated NSR pollutant" for PSD to add a paragraph providing that "particulate matter (PM) emissions, PM_{2.5} emissions and PM₁₀ emissions" shall include gaseous emissions from a source or activity which condense to form particulate matter at ambient temperatures and that on or after January 1, 2011, such condensable particulate matter shall be accounted for in applicability determinations and in establishing emissions limitations for PM, PM_{2.5} and PM₁₀ in permits. *See* 40 CFR 51.166(b)(49)(vi), 52.21(b)(50)(vi) and "Emissions Offset Interpretative Ruling" (40 CFR part 51, appendix S). A similar paragraph added to the NNSR rule does not include "particulate matter (PM) emissions." *See* 40 CFR 51.165(a)(1)(xxxvii)(D).

On March 16, 2012, EPA proposed a rulemaking to amend the definition of "regulated NSR pollutant" promulgated in the NSR PM_{2.5} Rule regarding the PM condensable provision at 40 CFR 51.166(b)(49)(vi), 52.21(b)(50)(i) and

³ Florida's March 15, 2012, SIP revision only addresses the State's PSD permitting program and does not adopt the NNSR permitting requirements for PM_{2.5} emission offsets, condensable provision or the discretionary interpollutant trading policy and ratios promulgated in the 2008 NSR PM_{2.5} Rule. Moreover Florida is attainment for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS.

⁴ Additional information on this issue can also be found in an August 12, 2009, final order on a title V petition describing the use of PM₁₀ as a surrogate for PM_{2.5}. In the Matter of *Louisville Gas & Electric Company*, Petition No. IV-2008-3, Order on Petition (August 12, 2009).

⁵ Sources that applied for a PSD permit under the federal PSD program on or after July 15, 2008, are already excluded from using the 1997 PM₁₀ Surrogate Policy as a means of satisfying the PSD requirements for PM_{2.5}. *See* 76 FR 28321.

EPA's Emissions Offset Interpretative Ruling. See 77 FR 15656. The rulemaking proposes to remove the inadvertent requirement in the NSR PM_{2.5} Rule that the measurement of condensable "particulate matter emissions" be included as part of the measurement and regulation of "particulate matter emissions." The term "particulate matter emissions" includes particles that are larger than PM_{2.5} and PM₁₀ and is an indicator measured under various New Source Performance Standards (NSPS) (40 CFR part 60).⁶ Florida's March 15, 2012, SIP revision did not adopt the term "particulate matter emissions" regarding the requirement to consider condensables as promulgated in the NSR PM_{2.5} Rule.

B. PM_{2.5} PSD Increment-SILs-SMC Rule

As mentioned above, EPA finalized the PM_{2.5} PSD Increment-SILs-SMC Rule to provide additional regulatory requirements under the PSD program regarding the implementation of the PM_{2.5} NAAQS for NSR.⁷ Specifically, the rule establishes the following to implement the PM_{2.5} NAAQS for the PSD program: (1) PM_{2.5} increments pursuant to section 166(a) of the CAA to prevent significant deterioration of air quality in areas meeting the NAAQS; (2) SILs used as a screening tool (by a major source subject to PSD) to evaluate the impact a proposed major source or modification may have on the NAAQS or PSD increment; and (3) a SMC, (also a screening tool) used by a major source subject to PSD to determine the subsequent level of data gathering required for a PSD permit application for emissions of PM_{2.5}. As part of the response to comments on October 20, 2010 final rulemaking, EPA explained that, the agency agrees that the SILs and SMC used as *de minimis* thresholds for the various pollutants are useful tools that enable permitting authorities and PSD applicants to screen out "insignificant" activities; however, the fact remains that these values are not required by the Act as part of an approvable SIP program. EPA believes that most states are likely to adopt the SILs and SMC because of the useful purpose they serve regardless of our position that the values are not

mandatory. Alternatively, states may develop more stringent values if they desire to do so. In any case, states are not under any SIP-related deadline for revising their PSD programs to add these screening tools. See 75 FR 64864, 64900.

Florida's March 15, 2012, SIP revision adopts the PM_{2.5} PSD Increments (which are statutorily required) as well as the SILs and SMC promulgated in the PM_{2.5} PSD Increment-SILs-SMC Rule to be consistent with the federal NSR regulations and to appropriately implement the State's NSR program for the PM_{2.5} NAAQS. More detail on the PM_{2.5} PSD Increment-SILs-SMC Rule can be found in EPA's October 20, 2010, final rule and is summarized below. See 75 FR 64864. EPA is not proposing to approve the SILs provisions (promulgated in the PM_{2.5} PSD Increment-SILs-SMC Rule) into the Florida SIP in this rulemaking. EPA's authority to implement the SILs and SMC for PSD purposes has been challenged by the Sierra Club. See *Sierra Club v. EPA*, Case No. 10-1413 (D.C. Circuit Court).⁸ More details regarding Florida's changes to its NSR regulations are also summarized below in Section IV.

1. What are PSD increments?

As established in part C of title I of the CAA, EPA's PSD program protects public health from adverse effects of air pollution by ensuring that construction of new or modified sources in attainment or unclassifiable/attainment areas does not lead to significant deterioration of air quality while simultaneously ensuring that economic growth will occur in a manner consistent with preservation of clean air resources. Under section 165(a)(3) of the CAA, a PSD permit applicant must demonstrate that emissions from the proposed construction and operation of a facility "will not cause, or contribute to, air pollution in excess of any maximum allowable increase or allowable concentration for any pollutant." In other words, when a source applies for a permit to emit a regulated pollutant in an area that meets the NAAQS, the state and EPA must determine if emissions of the regulated pollutant from the source will cause significant deterioration in air quality. Significant deterioration occurs when the amount of the new pollution exceeds the applicable PSD increment, which is the "maximum allowable increase" of an air pollutant allowed to

occur above the applicable baseline concentration⁹ for that pollutant. PSD increments prevent air quality in clean areas from deteriorating to the level set by the NAAQS. Therefore an increment is the mechanism used to estimate "significant deterioration" of air quality for a pollutant in an area.

For PSD baseline purposes, a baseline area for a particular pollutant emitted from a source includes the attainment or unclassifiable/attainment area in which the source is located as well as any other attainment or unclassifiable/attainment area in which the source's emissions of that pollutant are projected (by air quality modeling) to result in an ambient pollutant increase of at least 1 µg/m³ (annual average). See 40 CFR 52.21(b)(15)(i). Under EPA's existing regulations, the establishment of a baseline area for any PSD increment results from the submission of the first complete PSD permit application and is based on the location of the proposed source and its emissions impact on the area. Once the baseline area is established, subsequent PSD sources locating in that area need to consider that a portion of the available increment may have already been consumed by previous emissions increases. In general, the submittal date of the first complete PSD permit application in a particular area is the operative "baseline date."¹⁰ On or before the date of the first complete PSD application, emissions generally are considered to be part of the baseline concentration, except for certain emissions from major stationary sources. Most emissions increases that occur after the baseline date will be counted toward the amount of increment consumed. Similarly, emissions decreases after the baseline date restore or expand the amount of increment that is available. See 75 FR 64864. As described in the PM_{2.5} PSD Increment-SILs-SMC Rule, pursuant to the authority under section 166(a) of the CAA, EPA promulgated numerical increments for PM_{2.5} as a new pollutant¹¹ for which the NAAQS were

⁹ Section 169(4) of the CAA provides that the baseline concentration of a pollutant for a particular baseline area is generally the same air quality at the time of the first application for a PSD permit in the area.

¹⁰ Baseline dates are pollutant specific. That is, a complete PSD application establishes the baseline date only for those regulated NSR pollutants that are projected to be emitted in significant amounts (as defined in the regulations) by the applicant's new source or modification. Thus, an area may have different baseline dates for different pollutants.

¹¹ EPA generally characterized the PM_{2.5} NAAQS as a NAAQS for a new indicator of PM. EPA did not replace the PM₁₀ NAAQs with the NAAQS for PM_{2.5} when the PM_{2.5} NAAQS were promulgated in 1997. EPA rather retained the annual and 24-hour

⁶ In addition to the NSPS for PM, states have regulated "particulate matter emissions" for many years in their SIPs for PM, and the same indicator has been used as a surrogate for determining compliance with certain standards contained in 40 CFR part 63 regarding National Emission Standards for Hazardous Air Pollutants.

⁷ EPA proposed approval of the PSD Increments-SILs-SMC Rule on September 21, 2007. See 72 FR 54112.

⁸ On April 6, 2012, EPA filed a brief with the D.C. Circuit court defending the Agency's authority to implement SILs and SMC for PSD purposes.

established after August 7, 1977,¹² and derived 24-hour and annual PM_{2.5} increments for the three area classifications (Class I, II and III) using the “contingent safe harbor” approach. See 75 FR 64864 at 64869 and table at 40 CFR 51.166(c)(1).

In addition to PSD increments for the PM_{2.5} NAAQS, the PM_{2.5} PSD Increment-SILs-SMC Rule amended the definition at 40 CFR 51.166 and 52.21 for “major source baseline date” and “minor source baseline date” (including trigger dates) to establish the PM_{2.5} NAAQS specific dates associated with the implementation of PM_{2.5} PSD increments. See 75 FR 64864. In accordance with section 166(b) of the CAA, EPA required the states to submit revised implementation plans to EPA for approval (to adopt the PM_{2.5} PSD increments) within 21 months from promulgation of the final rule (by July 20, 2012). Each state was responsible for determining how increment consumption and the setting of the minor source baseline date for PM_{2.5} would occur under its own PSD program. Regardless of when a State begins to require PM_{2.5} increment analysis and how it chooses to set the PM_{2.5} minor source baseline date, the emissions from sources subject to PSD for PM_{2.5} for which construction commenced after October 20, 2010, (major source baseline date) consume the PM_{2.5} increment and should be included in the increment analyses occurring after the minor source baseline date is established for an area under the state’s revised PSD program. As discussed in detail in Section IV, Florida’s March 15, 2012, SIP revision adopts the PM_{2.5} increment permitting requirements promulgated in the PM_{2.5} PSD Increment-SILs-SMC Rule.

2. What are significant monitoring concentrations?

Under the CAA and EPA regulations, an applicant for a PSD permit is required to gather preconstruction monitoring data in certain circumstances. Section 165(a)(7) calls for “such monitoring as may be necessary to determine the effect which emissions from any such facility may have, or is having, on air quality in any areas which may be affected by emissions from such source.” In

addition, section 165(e) requires an analysis of the air quality in areas affected by a proposed major facility or major modification and calls for gathering one year of monitoring data unless the reviewing authority determines that a complete and adequate analysis may be accomplished in a shorter period. These requirements are codified in EPA’s PSD regulations at 40 CFR 51.166(m) and 40 CFR 52.21(m). In accordance with EPA’s Guideline for Air Quality Modeling (40 CFR part 51, appendix W), the preconstruction monitoring data is primarily used to determine background concentrations in modeling conducted to demonstrate that the proposed source or modification will not cause or contribute to a violation of the NAAQS. See 40 CFR part 51, appendix W, section 9.2. SMCs are numerical values that represent thresholds of insignificant (i.e., *de minimis*¹³), monitored (ambient) impacts on pollutant concentrations. In EPA’s PM_{2.5} PSD Increment-SILs-SMC Rule, EPA established a SMC of 4 µg/m³ for PM_{2.5} to be used as a screening tool by a major source subject to PSD to determine the subsequent level of data gathering required for a PSD permit application for emissions of PM_{2.5}. See 75 FR 64864.

Using the SMC as a screening tool, sources may be able to demonstrate that the modeled air quality impact of emissions from the new source or modification, or the existing air quality level in the area where the source would construct, is less than the SMC (i.e., *de minimis*), and as such, may be allowed to forego the preconstruction monitoring requirement for a particular pollutant at the discretion of the reviewing authority. See 40 CFR 51.166(i)(5) and 52.21(i)(5). SMCs are not minimum required elements of an approvable SIP under the CAA. This *de minimis* value is widely considered to be a useful component for implementing the PSD program, but is not absolutely necessary for the states to implement PSD programs. States can satisfy the statutory requirements for a PSD program by requiring each PSD applicant to submit air quality monitoring data for PM_{2.5} without using *de minimis* thresholds to exempt certain sources from such requirements. See 75 FR 64864. The SMC became effective

under the federal PSD program on December 20, 2010. States with EPA-approved PSD programs that adopt the SMC for PM_{2.5}, however, may use the SMC, once it is part of an approved SIP, to determine when it may be appropriate to exempt a particular major stationary source or major modification from the monitoring requirements under its state PSD program. Florida’s March 15, 2012, SIP revision adopts the SMC provision into the Florida SIP.

Recently, the Sierra Club filed suit challenging EPA’s authority to implement the PM_{2.5} SILs¹⁴ as well as the SMC for PSD purposes as promulgated in the October 20, 2010, rule. *Sierra Club v. EPA*, Case No 10–1413, D.C. Circuit Court. Specifically regarding the SMC, the Sierra Club claims that the use of an SMC to exempt a source from submitting a year’s worth of monitoring data is inconsistent with the CAA. EPA responded to Sierra Club’s claims in a Brief dated April 6, 2012, which described the Agency’s authority to develop and promulgate SMC.¹⁵ A copy of EPA’s April 6, 2012, Brief can be found in the docket for today’s rulemaking at www.regulations.gov using docket ID: EPA–R04–OAR–2012–0555.

IV. What is EPA’s analysis of Florida’s SIP revision?

Florida currently has a SIP-approved NSR program for new and modified stationary sources. FDEP’s PSD program definitions and preconstruction permitting rules are found at rule 62–210.200, F.A.C., and rules 62–212.300 through 62–212.400, F.A.C., respectively. These rules apply to major stationary sources or modifications constructed in areas designated attainment or unclassifiable/attainment as required under part C of title I of the CAA with respect to the NAAQS. FDEP’s March 15, 2012, changes to Chapters 62–210, F.A.C., and 62–212, F.A.C., were submitted to adopt into Florida’s NSR permitting program PSD provisions promulgated in the NSR PM_{2.5} Rule and the PM_{2.5} PSD Increment-SILs-SMC rule. These changes to Florida’s regulations became

¹⁴ As mentioned earlier, due to litigation by the Sierra Club, EPA is not proposing to take action on the SILs portion of Florida’s March 15, 2012, SIP revision at this time but will take action once the court case regarding SILs implementation is resolved.

¹⁵ Additional information on this issue can also be found in an April 25, 2010, comment letter from EPA Region 6 to the Louisiana Department of Environmental Quality regarding the SILs-SMC litigation. A copy of this letter can be found in the docket for today’s rulemaking at www.regulations.gov using docket ID: EPA–R04–OAR–2012–0555.

NAAQS for PM_{2.5} as if PM_{2.5} was a new pollutant even though EPA had already developed air quality criteria for PM generally. See 75 FR 64864 (October 20, 2012).

¹² EPA interprets 166(a) to authorize EPA to promulgate pollutant-specific PSD regulations meeting the requirements of section 166(c) and 166(d) for any pollutant for which EPA promulgates a NAAQS after 1977.

¹³ The *de minimis* principle is grounded in decision described by the court case *Alabama Power Co. v. Costle*, 636 F.2d 323, 360 (D.C. Cir. 1980). In this case reviewing EPA’s 1978 PSD regulations, the court recognized that “there is likely a basis for an implication of *de minimis* authority to provide exemption when the burdens of regulation yield a gain of trivial or no value.” 636 F.2d at 360.

state effective on March 28, 2012. EPA is proposing to approve these changes into the Florida SIP to be consistent with federal NSR regulations (at 40 CFR 51.166 and 52.21) and the CAA.

A. NSR PM_{2.5} Implementation Rule

Florida's March 15, 2012, SIP revision establishes that the State's existing NSR permitting program requirements for PSD apply to the PM_{2.5} NAAQS and its precursors. Specifically, the SIP revision adopts the following NSR PM_{2.5} Rule PSD provisions into the Florida SIP: (1) The requirement for NSR permits to address directly emitted PM_{2.5} and precursor pollutants; (2) significant emission rates for direct PM_{2.5} and precursor pollutants (SO₂ and NO_x) and (3) the requirement that condensable PM be addressed in enforceable PM₁₀ and PM_{2.5} emission limits included in PSD permits. The March 15, 2012 changes revised the definition for "significant emissions rates" at 62–21.200(282) to establish SO₂ and NO_x as PM_{2.5} precursors and adopt significant emission rates for direct PM_{2.5} and PM_{2.5} precursors for major modifications at existing sources (as amended at 40 CFR 51.166(b)(23)(i)) and established the requirement that condensable PM₁₀ and PM_{2.5} emissions be accounted for in PSD applicability determinations and in establishing emissions limitations for PM at 62–212.300(1)(f) as amended at 40 CFR 51.166(b)(49). In addition, Florida's March 15, 2012, SIP revision added definitions for "condensable PM₁₀" at 62–210.200(94), "condensable PM_{2.5}" at 62–210–200(95) and "condensable PM" at 62–210.200(93), for clarification purposes. EPA is proposing to approve the aforementioned changes into the Florida SIP.

B. PM_{2.5} PSD Increment-SILs-SMC Rule

Florida's March 15, 2012, SIP revision adopts, into the Florida SIP, the following PSD provisions promulgated in the PM_{2.5} PSD Increment-SILs-SMC Rule: (1) PSD increments for PM_{2.5} annual and 24-hour NAAQS pursuant to section 166(a) of the CAA (at Chapter 62–210, F.A.C.); (2) SILs to be used as a screening tool to evaluate the impact a proposed major source or modification may have on the NAAQS or PSD increment (at Chapters 62–210, F.A.C., and 62–212, F.A.C.); and (3) SMC, also used as a screening tool, to determine the level of data gathering required of a major source in support of its PSD permit application for PM_{2.5} emissions. Specifically, the SIP revision makes the following changes to Florida's PSD regulations to adopt PSD increment provisions established in the PM_{2.5} PSD Increment-SILs-SMC rule at Chapters

62–210 and 62–212, F.A.C.: (1) Revises the definition for "maximum allowable increase" to incorporate by reference (IBR) the PM_{2.5} PSD increments numerical values (established in the tables at 40 CFR 52.21(c) at 62–204.800, F.A.C.¹⁶); (2) amends definitions for "major source baseline date" and "minor source baseline date" to establish relevant dates for PM_{2.5} increment consumption and establish trigger dates (as established at 40 CFR 51.166(b)(14)(i)(c) and 51.166(b)(14)(ii)(c) respectively) and; (3) revises the definition for "baseline area" as promulgated at 40 CFR 51.166(b)(15)(i) and (ii) and adds definitions for "baseline concentration." The March 15, 2012, SIP submission also adds a definitions for "Class I and II Areas" at Chapter 62–210.200(77) and (78), F.A.C. respectively. The definition for Class I Areas IBR 40 CFR part 81, Subpart D (the federal Class I Area list) at rule 61 62–204.800, F.A.C.). In today's action, EPA is proposing to approve Florida's March 15, 2012, SIP revision to address PM_{2.5} PSD increments.

Regarding the SILs and SMC established in the October 20, 2010, PM_{2.5} PSD Increment-SILs-SMC Rule, the Sierra Club has challenged EPA's authority to implement SILs and SMC. In a brief filed in the D.C. Circuit on April 6, 2012, EPA described the Agency's authority under the CAA to promulgate and implement the SMC and SILs *de minimis* thresholds. Florida's SIP revision includes the SMC of 4 µg/m³ for PM_{2.5} NAAQS (at rule 62–212.400(3)(e)1, F.A.C.) that was added to the existing monitoring exemption at 40 CFR 51.166(i)(5)(i)(c) and 52.21(i)(5)(i)(c). With respect to the SMC, EPA is proposing to approve these promulgated thresholds into the Florida SIP as EPA believes the use of the SMC is a valid exercise of the Agency's *de minimis* authority. Furthermore, Florida's March 15, 2012, SIP revision is consistent with EPA's current promulgated provisions in the October 20, 2010, rule. However, EPA notes that future court action may require subsequent rule revisions and SIP revisions from Florida.

The March 15, 2012, SIP revision submitted by Florida to adopt the new PSD requirements for PM_{2.5} pursuant to the PM_{2.5} PSD Increment-SILs-SMC Rule also includes the new regulatory text at 40 CFR 51.166(k)(2) and 52.21(k)(2), concerning the implementation of SILs for PM_{2.5}. EPA stated in the preamble to the October 20, 2010 final rule that we

do not consider the SILs to be a mandatory SIP element, but regard them as discretionary on the part of regulating authority for use in the PSD permitting process. Nevertheless, the PM_{2.5} SILs are currently the subject of litigation before the U.S. Court of Appeals. (*Sierra Club v. EPA*, Case No 10–1413 D.C. Circuit). In response to that litigation, EPA has requested that the Court remand and vacate the regulatory text in the EPA's PSD regulations at paragraph (k)(2) so that EPA can make necessary rulemaking revisions to that text. In light of EPA's request for remand and vacatur and our acknowledgement of the need to revise the regulatory text presently contained at paragraph (k)(2) of sections 51.166 and 52.21, EPA does not believe that it is appropriate at this time to approve that portion of the State's implementation plan revision that contains or is related to the affected regulatory text in the State's PSD regulations, at rule, 62–212.400(5), F.A.C and 62–210.200(283)(c), F.A.C.. Instead, EPA is taking no action at this time with regard to these specific provisions contained in the SIP revision. EPA will take action on the SILs portion of Florida's March 15, 2012, SIP revision in a separate rulemaking once the issue regarding the court case has been resolved.

The aforementioned amendments to Florida's SIP provide the framework for implementation of PM_{2.5} NAAQS in the states NSR permitting. Based on review and consideration of Florida's March 15, 2012, SIP revision, EPA has made the preliminary determination to approve the aforementioned PSD permitting provisions promulgated in the NSR PM_{2.5} Rule and PM_{2.5} PSD Increment-SILs-SMC Rule into the Florida SIP to implement the NSR program for the PM_{2.5} NAAQS.

V. Proposed Action

EPA is proposing to approve portions of Florida March 15, 2012, SIP revision adopting federal regulations amended in the May 16, 2008, NSR PM_{2.5} Rule and the October 20, 2010, PM_{2.5} PSD Increment-SILs-SMC rule into the Florida SIP with the exception of the SILs provisions. EPA has made the preliminary determination that this SIP revision, with regard to aforementioned proposed actions, is approvable because it is consistent with section 110 of the CAA and EPA regulations regarding NSR permitting.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the

¹⁶ Florida IBR federal rules at rule 62–204.800 F.A.C.

Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
 - Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
 - Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
 - Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
 - Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
 - Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
 - Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
 - Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
 - Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).
- In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

Approval and Promulgation of Air Quality Implementation Plans; Maryland; Control of Iron and Steel Production Installations; Sintering Plants

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA proposes to approve revisions to the Maryland State Implementation Plan (SIP) submitted by the Maryland Department of the Environment (MDE) on June 30, 2009. The revisions amend the visible emissions requirements of the Maryland SIP's regulation for the Control of Iron and Steel Production Installations as they apply to sintering plants. The sintering plant located at the Sparrows Point steelmaking facility (Sparrows Point) is the only sintering plant located in the State of Maryland, and therefore the only source affected by these SIP revisions. The revisions exempt the sintering plant from the visible emissions section of the regulation for the Control of Iron and Steel Production Installations contingent upon the source's two wet scrubbers, used to control emissions of particulate matter, continuously monitoring compliance with specified pressure drop and flow rate operating parameters. EPA is approving these revisions because they provide for a continuous means of determining compliance with the applicable SIP emission rate for particulate matter from the sintering plant located at Sparrows Point, and because that emission rate has been demonstrated to protect and maintain the National Ambient Air Quality Standards (NAAQS) for PM₁₀ (particulate matter consisting of particles with an aerodynamic diameter less than or equal to 10 micrometers). EPA is proposing to approve these revisions in accordance with the requirements of the Clean Air Act (CAA). In the Final Rules section of this

Federal Register, EPA is approving the State's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this action, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time.

DATES: Comments must be received in writing by August 27, 2012.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA-R03-OAR-2012-0272 by one of the following methods:

A. www.regulations.gov. Follow the on-line instructions for submitting comments.

B. Email: spink.marcia@epa.gov.

C. Mail: EPA-R03-OAR-2012-0272, Marcia L. Spink, Associate Director for Policy & Science, Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA-R03-OAR-2012-0272. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at www.regulations.gov, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through www.regulations.gov or email. The www.regulations.gov Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through www.regulations.gov, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic
