

Recovery Plan identifies actions needed to achieve recovery by improving population and habitat conditions and addressing threats to the species; links management actions to a research and monitoring program intended to fill data gaps and assess effectiveness of actions; incorporates an adaptive management framework by which management actions and other elements may evolve as we gain information through research and monitoring; and describes agency guidance on time lines for reviews of the status of species and recovery plans. To address threats related to the species, the Public Draft Recovery Plan references many of the significant efforts already underway to restore salmon and steelhead access to high quality habitat and to improve habitat previously degraded.

Recovery of CC Chinook salmon, and NC and CCC steelhead will require a long-term effort in cooperation and coordination with Federal, state, tribal and local government agencies, and the community. Consistent with the Recovery Plan, we will implement relevant actions for which we have authority, work cooperatively on implementation of other actions, and encourage other Federal and state agencies to implement recovery actions for which they have responsibility and authority.

In compliance with the requirements of the ESA section 4(f), NMFS is providing public notice and an opportunity to review and comment on the Public Draft Recovery Plan for CC Chinook salmon, and NC and CCC steelhead prior to its final approval.
