

Transmittal No. 10-68

Notice of Proposed Issuance of Letter of Offer
Pursuant to Section 36(b)(1)
of the Arms Export Control Act (U)

Annex
Item No. vii

(vii) Sensitivity of Technology:

1. The Light Armored Vehicle (LAV) and all associated documentation are Unclassified. Sensitive technologies, to include the Improved Thermal Sight System (ITSS) and Modified Improved TOW Acquisition System (MITAS), are integral to the LAV-25 and LAV Anti-Tank (TOW) mission role variants. The AN/VAS-5 Drivers Vision Enhancer is integral to all mission role variants.

2. The MITAS is a thermal sight system consisting of a target acquisition and fire control system that gives the LAV Anti-Tank (TOW) Vehicle crews a substantial advantage over the potential threat. The MITAS provides the crew with the ability to effectively aim, fire, and track the TOW missiles in adverse battlefield conditions while the weapon system is stationary. The hardware itself is Unclassified. The engineering design and manufacturing data associated with the detector and infrared optics are considered sensitive. The technical data package is Unclassified with the exception of the specifications for target acquisition range (Confidential), nuclear hardening (Confidential), and laser hardening (Secret).

3. The AN/VAS-5 Drivers Vision Enhancer (DVE) consists of a sensor module, display control module, and a vehicle-unique integration bracket. The sensor module consists of a long wavelength infrared thermal imager based on a 240/320 uncooled array and a 30/40 degree objective lens assembly. The sensor module's uncooled infrared technology eliminates the need for a cryogenic cooler, substantially reducing costs while increasing system reliability. The display control module is a 10.4 inch diagonal liquid crystal display with integral operator controls. The modularity of the sensor and display control module allows DVE to be easily integrated into many combat and tactical wheeled vehicles.

4. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
