SUPPLEMENTARY INFORMATION:

I. Abstract

The purpose of this information collection is to gather historical and current population and biological information from commercial and recreational harvesters of the two species of river herring; alewife (*Alosa pseudoharengus*) and blueback (*A. aestivalis*). Given that commercial and recreational fishermen have a unique and important understanding of the long term status of the species for which they are fishing, NOAA intends to contact both current and retired recreational and commercial harvesters of river herring from Maine to North Carolina, to inquire about recent and long-term observations of changes in run-timing, abundance, distribution, individual size and species composition. Results will be used to assist NOAA in identifying observational trends among river herring populations throughout their range so as to make more informed

decisions with respect to their management.
