The National Environmental Policy Act of 1969 (NEPA) requires Federal agencies to evaluate the effects of their actions on human environmental quality. To comply with NEPA, the Commission adopted rules in 1997, 47 CFR 1.1307, which revised the Radio Frequency (RF) exposure guidelines for FCC-regulated facilities. The guidelines reflect more recent scientific studies of RF electromagnetic fields and their biological effects, and are designed to ensure that the public and workers are adequately protected from exposure to potentially harmful RF electromagnetic fields. The FCC staff uses the information required under section 1.1307 to determine whether the environmental evaluation is sufficiently complete and in compliance with the FCC rules to be acceptable for filing.

This information is needed because the Commission requires applicants to perform an environmental evaluation with respect to radio frequency electromagnetic fields. Applicants are required to consider contributions from other transmitters within the vicinity of their facility in order to assess the cumulative exposure. Accordingly, to correctly determine compliance with the Commission's exposure limits, an applicant must locate, determine ownership, and gather technical

information for all contributing transmitters.

Federal Communications Commission.

Secretary.
